# CA Performance Management 3.5

Network Operations and Analytics Beta Program
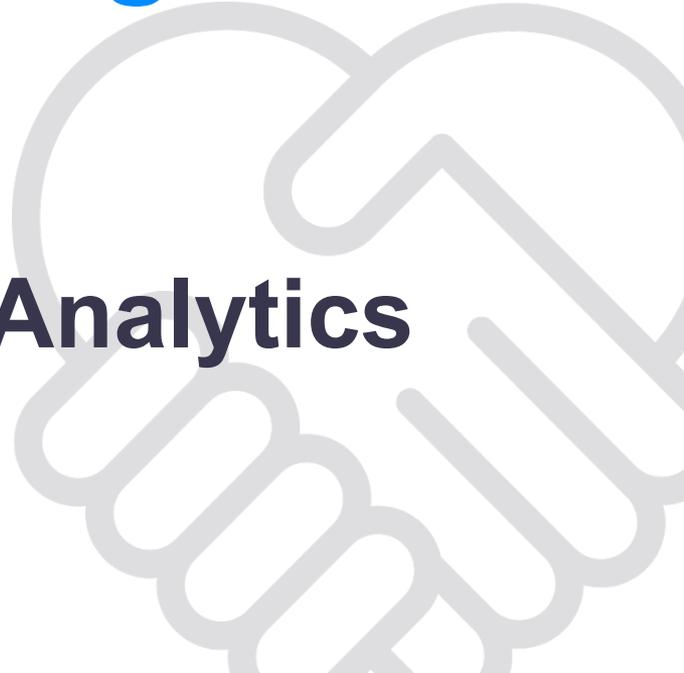

We've been hard at work

CA Performance Management 3.5

- View and manage Spectrum alarms right within CA Performance Center (our NetOps portal)

- Gain new insights into your data with CA Business Intelligence 'Situations to Watch' reports

- Streamline Cisco ACI SDDC troubleshooting with ACI fault integration

- Enhance your protection from data-loss and outages with advancements in our High Availability vision

- Expand your OpenAPI App functionality with device and interface aliases

- Build (and preserve on upgrade) your own CA Performance Center custom themes – finally!

- **And more!**

Your feedback means so much, & we know you're busy.

At CA Technologies we are Agile and that means your feedback helps shape our software.

Beta is a great time to engage because we're all listening.

We provide help and guidance.

Your feedback drives the value you need.

And now it's easier than ever to participate!

Your beta, your choice!
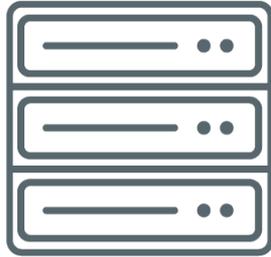

On-Premise

- We provide software & guidance
- You provide the infrastructure
- Best kind of feedback we can get

Requires lab environment installation of CAPM 3.5, VNA 3.5 (optional) and CAMM 3.5 (optional)

Hybrid-SaaS

- We host the components
- You supply the monitoring
- You see your data in our cloud

Requires installation of VM image and OpenVPN connection over SSL to CA SaaS environment.

SaaS

- We host it all.
- You get a login & a sandbox
- We get some great feedback

Requires CA assigned CAPC user and password
