

Q&A Session for DevTest Community Webcast

Date: Thursday, January 18, 2018

---

-Karl Miller - 11:13 AM

Q: In the User Counts We see CAI users being logged on the enterprise dashboard when we use admin credentials to monitor server health. Is this changed in 10.2?

-Sachin Srivastava - 11:16 AM

A: Hi Karl, Yes this has changed. We now provide all the power user information instead of individual power user count-

---

-Jianhua Dong - 11:45 AM

Q: I have lots of VSE created in 9.1. Can I directly use them in 10.2 without any major modifications?

-Sachin Srivastava - 11:46 AM

A: Yes. No changes are required-

---

-mohd.a.mudassir - 11:46 AM

Q: Deploying Service with same name was removing the old Service without any warning.. is that issue is resolved in 10.2

Priority: N/A-

-Melanie Giuliani - 11:47 AM

A: we need to double check on that and get back with you privately on that-

-Sachin Srivastava - 11:48 AM

A: Hi Mudassir, are you using Devtest linux box?-

---

-Balamurugan - 11:47 AM

Q: what are the new rest api introduced in 10.2

-Melanie Giuliani - 11:48 AM

A: within the api we have introduced a download command. beverly doesn't know if it's specifically new, but it's been added to 10.2 from that API. if there is a specific feature you're referring to, please let us know-

---

-Jianhua Dong - 11:49 AM

Q: The charts showing number of transactions and number of VSEs are great. Can I download these charts to my local machine?

-Melanie Giuliani - 11:49 AM

A: At this time there's no direct way to export/download the charts. we are continuing to refine this functionality, so if this is something that you'd be interested in, please reach out to Beverly to discuss this in more detail. -

---

-mohd.a.mudassir - 11:50 AM

Q: there is one new functionality enhanced VS recorder.. please help to cover that

-Melanie Giuliani - 11:50 AM

A: this was added in 10.1. you have the ability to create virtual services by using code. The documentation on this feature should walk you through the steps: <https://docops.ca.com/devtest-solutions/10-2/en/using/using-ca-service-virtualization/using-devtest-portal-with-ca-service-virtualization/create-virtual-services-by-recording>

---

-Jianhua Dong - 11:53 AM

Q: In the past, when I install Server on a cloud machine and workstation on a physical machine, the connection to the registry from physical machine is hard to be established. Any enhancement on this part?

-Melanie Giuliani - 11:54 AM

A: This could actually be a network issue (connection speed, etc.) bc the team tested something similar and didn't run into any issue with it. Might be worthwhile to open a question on the community for this-
