CA MICS® Resource Management Plus

Product sheet addendum—external

CA MICS Resource Management Plus includes the following interfaces, options and capabilities in the base product license.

Space Analyzer and Space Collector	Used together, these options collect data about DASD storage use and capacity, and store this data in a CA MICS database. Use the information and reports provided by these options to better manage your storage environment by identifying problem areas in storage utilization, performing capacity planning and costing and tracking and charging for storage usage.
Performance Manager Option	This option provides a set of tutorials and software tools that help you track and analyze system performance. You can set goals for system performance, arrange hardware and software to achieve preferred performance, track/analyze actual achieved performance and repeat the cycle as needed to adapt to changes in workload, configuration, policy or newly observed system behavior.
