Agenda

- Thread Terminator:
 - Reporting on new Db2 zParms
- Db2 Tools Suite:
 - Db2 Function Level M508 and our tools
- Log Analyzer:
 - Reporting on encryption key label (changes with DDL reports)
- Sysview for Db2:
 - Control the Frequency of SQL Statistic Collection
 - Enhanced Support for zHyperlink

Please Ask Questions...

Thread Terminator

Andrew Badgley

andrew.badgley@broadcom.com

Reporting on new Db2 zParms

z/Parms are missing from CA Thread Terminator

- Every release of Db2 adds new z/Parms (and removes some as well)
- CA Thread Terminator has not kept up with these z/Parm changes

Updates to CA Thread Terminator 'View DSNZPARM Data'

- **PTF - SO15132**
- **Db2 12 parameters:**
 - AUTH_COMPATIBILITY
 - DDL_MATERIALIZATION
 - DEFAULT_INSERT_ALGORITHM
 - INDEX_MEMORY_CONTROL
- **Db2 11 parameters:**
 - DISALLOW_SEL_INTO_UNION
 - REMOTE_COPY_SW_ACCEL

Db2 Tools Suite

Emil Kotrc

emil.kotrc@broadcom.com

V12R1M508 Update

V12R1M508 update

- [GA](#) since 14th October 2020
 - Migration of multi-table table spaces to partition-by-growth universal table spaces (UTS)
 - No catalog level change
- We completed our phase 1 testing
 - Products work with the maintenance, catalog, and activated function level
 - The main purpose is to validate the products run without changes
 - Some of our product are sensitive even to the maintenance level
 - No requirement to support new features - need to watch future enhancements for particular product
- Minimal PTFs
 - [SO15031](#), [SO15235](#), [SO15236](#), [SO15237](#), [SO15238](#)
- Fixcat CA.TargetSystem-RequiredService.DB2.V12R1Mnnn
- Db2 version support [documentation](#)

Any Questions...

Emil Kotrc
emil.kotrc@broadcom.com

Log Analyzer

Javier Estrada Benavides

javier.estradabenavides@broadcom.com

Report on Encryption Labels

CA Log Analyzer and encryption labels

Pervasive encryption was enabled with Db2 12 Function Level 502, where, among other configurations, you need to associate your Db2 objects with a KEY LABEL which provides encryption.

Where do I use this keyword?

- You can assign it by default using DFSMS routines. This will assign the proper value at Tablespace creation time.
- You can also assign a specific KEY LABEL on the following Db2 objects:
 - STOGROUPS
 - TABLES
- You can also use DDL ALTER to change the KEY LABEL at any time

Reporting KEY LABELs with CA Log Analyzer

Given the importance of KEY LABELs, you should be able to report on changes in values or when an object is created using this attribute in SQL.

With PTF **SO15220**, the DDL report in CA Log Analyzer has been enhanced to recognize this field in the Db2 Catalog and report on its values for all DDL operations that use KEY LABELs.

```
DDL Activity
```

FORMAT OPTIONS

```
Output Format ==> D ( R - Rept, D - Redo DDL, U - Undo DDL)
```

```
Level of Detail ==> D ( S - Smry, D - Detail, T - Tot, O - Object)
```

What can I see in the DDL report?

You'll notice KEY LABEL is reported for both CREATE and ALTER statements

```
CREATE TABLE SONMA03.TAB1 (COL1 INT)
KEY LABEL "DB2ENC.KEY";
COMMIT;

ALTER TABLE SONMA03.TAB1
NO KEY LABEL;
COMMIT;
```

```
SET CURRENT SQLID = 'SONMA03';

CREATE TABLE SONMA03.TAB1
(COL1 INTEGER
WITH DEFAULT NULL
)
APPEND NO
LOGGED
DSSIZE 4G
BUFFERPOOL BP1
NOT VOLATILE CARDINALITY
DATA CAPTURE NONE
OBID 3
AUDIT NONE
CCSID EBCDIC
COMPRESS NO
TRACKMOD YES
KEY LABEL "DB2ENC.KEY";

SET CURRENT SQLID = USER;

COMMIT;

SET CURRENT SQLID = 'SONMA03';

ALTER TABLE SONMA03.TAB1
NO KEY LABEL;

SET CURRENT SQLID = USER;
```

No special filtering or no new option is required from your side, the DDL report will find changes if they have occurred.

Any Questions...

Javier Estrada Benavides

javier.estradabenavides@broadcom.com

Sysview for Db2

Aysen Solak

aysen.solak@broadcom.com

Control the Frequency of SQL Statistics Collection

Control the Frequency of SQL Statistics Collection

- SYSVIEW for Db2 collects subsystem statistics and SQL statistics with a frequency set by **HISTORY-STATS-TIME** parameter.
- Collecting SQL statistics as often as the subsystem statistics is not required.
- In the conditions where the amount of the SQL statistics is big, collecting SQL data less frequent would help to optimize CPU usage.
- A new data collector system parameter **HIST-SQL-MULTIPLE** is introduced with **PTF SO14923**

Control the Frequency of SQL Statistics Collection

Control the Frequency of SQL Statistics Collection

- ✓ History and Archive Parameter : **HIST-STATS-RECS** Specifies the list of IFCID records to write to the statistics history file.
- ✓ If IFCID 316, 401, or both are stated for HIST-STATS-RECS parameter, review the size of your online statistics history file.
- ✓ **HISTORY-STATS-TIME** Specifies the interval, in minutes, at which the grabbed, non-event based Db2 trace records (specified in HIST-STATS-RECS) are collected and written to the online history statistics file.
- ✓ Specify the **HIST-SQL-MULTIPLE** system parameter

SQL statistics collection interval = HIST-SQL-MULTIPLE X HISTORY-STATS-TIME

Control the Frequency of SQL Statistics Collection

✓ Default Value is 1.

✓ Setting HIST-SQL-MULTIPLE to 0 behaves like 1

Enhanced Support for zHyperlink

With zHyperlink Reduce the Transaction Latency!

Delivered

Dataset I/O statistics (IFCID 199)

- New fields containing zHyperlink I/O delay information are now supported

Delivered

Log write I/O with zHyperlink

- Eligible to use zHyperlink and successfully used Hyperlink
- Eligible to use zHyperlink but did not use zHyperlink

Delivered

Report zHyperlink Utilization

- It is possible to monitor zHyperlink and make assessment with new values
- Analysis can be done : System Level
 - Buffer Pools Level
 - Thread Level

Delivered

Read I/O zHyperlink Use

- Reports for a single Read I/O operation if data was found in the DASD subsystem cache (Cache hit) or not
- Reports for a single Read I/O operation if zHyperlink was used or not

Delivered

Disk Cache Wait I/O and Disk Cache Hit not se zHyperlink

- Accumulated wait time for synchronous read I/O operations that resulted in Disk Cache hits.
- The number of synchronous read I/O operations which hit disk cache, but did not use zHyperLink

Enhanced Support for zHyperlink

DISK-CACHE-IO-WAIT

Specifies the accumulated wait time for synchronous read I/O operations that resulted in disk cache hits.

IBM DB2 Field Name: QWACAWTD

DISK-CACHE-IO-COUNT

Specifies the number of synchronous read I/O operations which hit disk cache, but did not use zHyperLink.

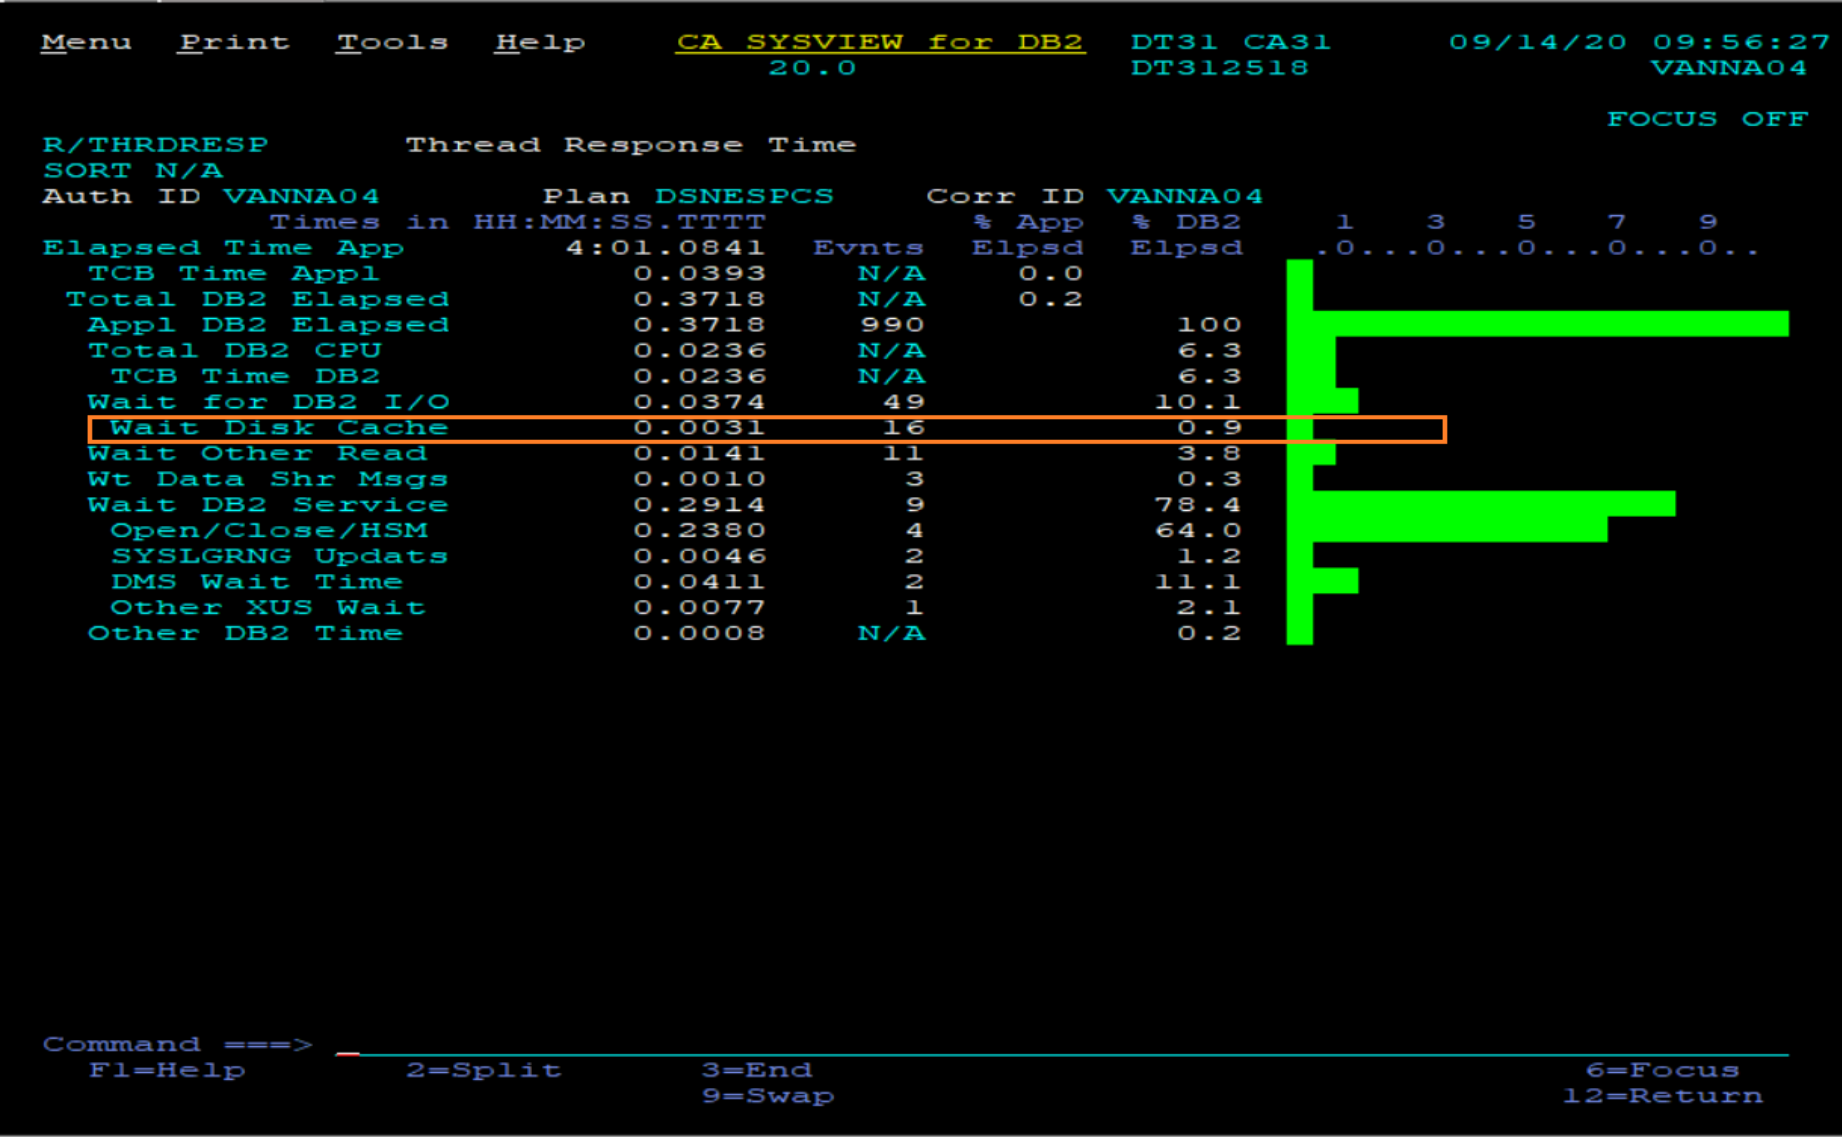

IBM DB2 Field Name: QWACAWCD

Updated Reports

- Thread Response time
- Probe Thread Summary Panel
- Thread Accounting Summary
- Accounting Summary for Plan Panel
- Connection Detail panel

- ✓ Real Time
- ✓ History
- ✓ History Summary
- ✓ Batch
