# What is Implementer / CA 2E CM?

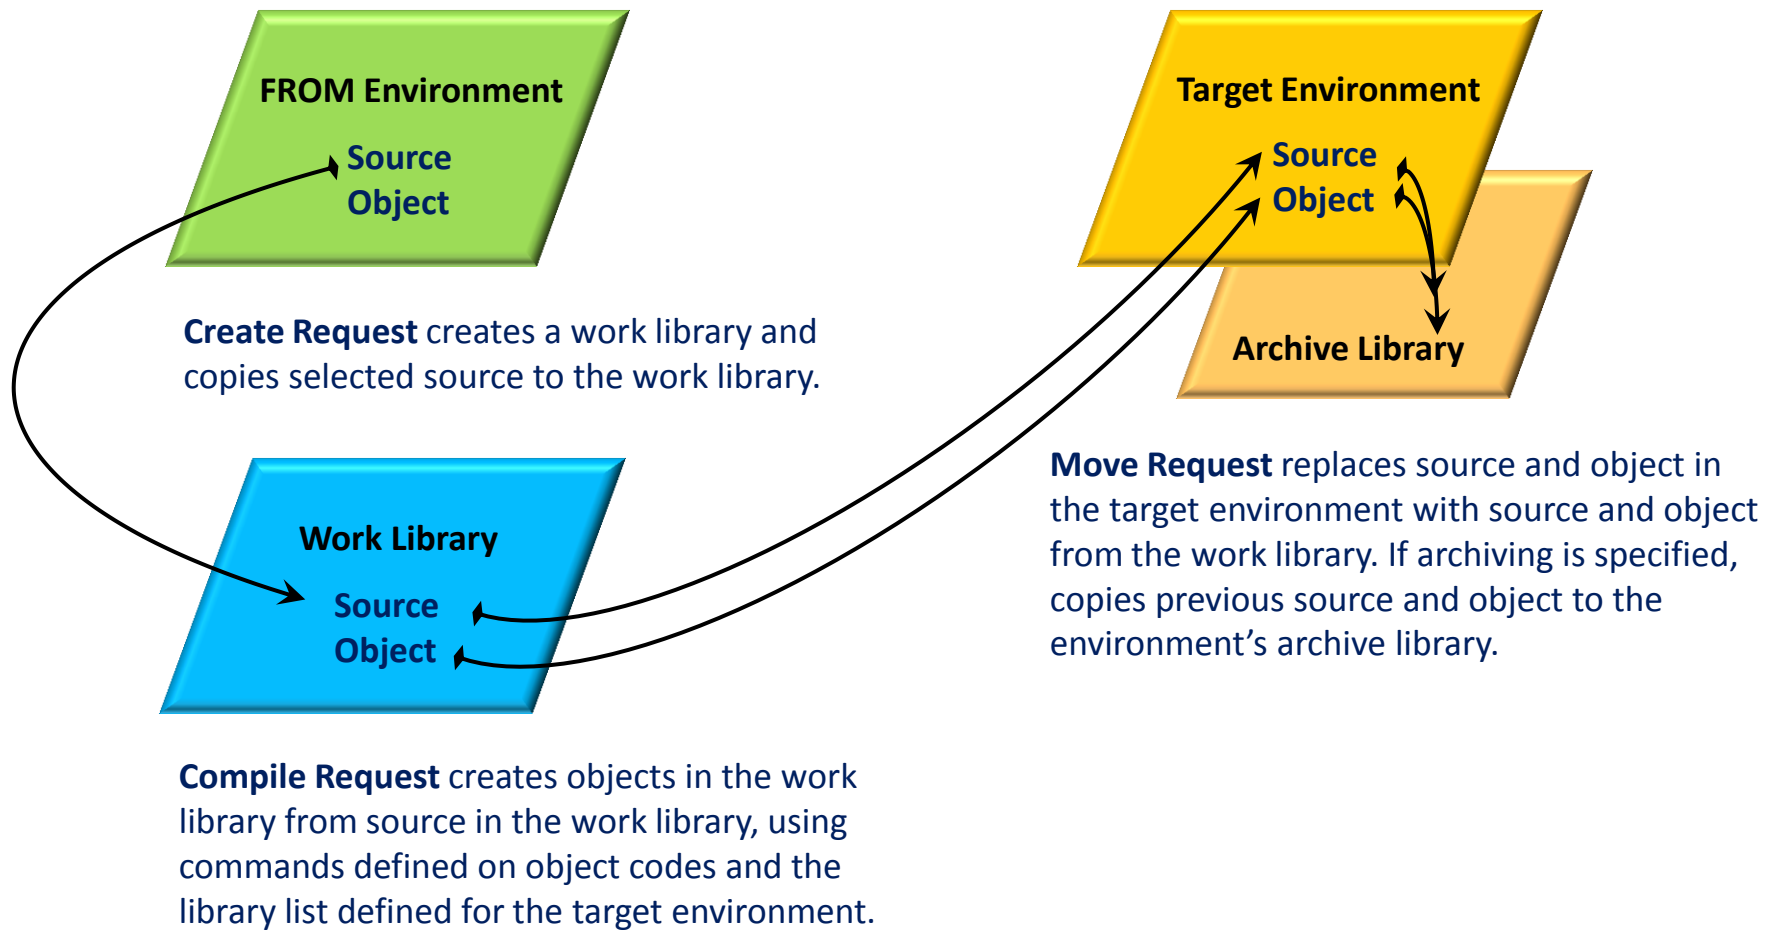

---

Implementer provides visibility to and control of software changes on your system

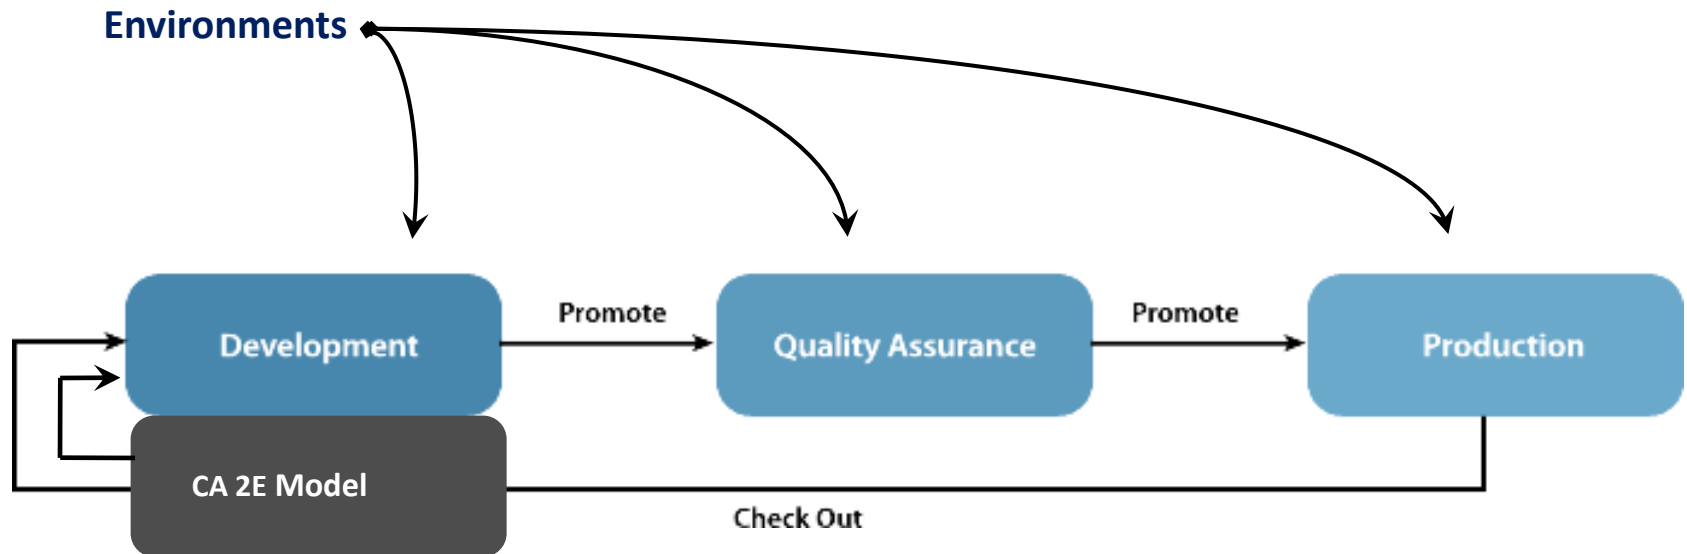

# Common Terms:

## Promotion Framework

# Common Terms:

## CA 2E Change Management

**Check Out** member/objects from production environment to development environment.

**Lock** created at check out remains until promotion to production.

**Promotion Request** moves changed member/objects from development to QA environment, and from QA environment back to production environment.

# Administration Overview

---

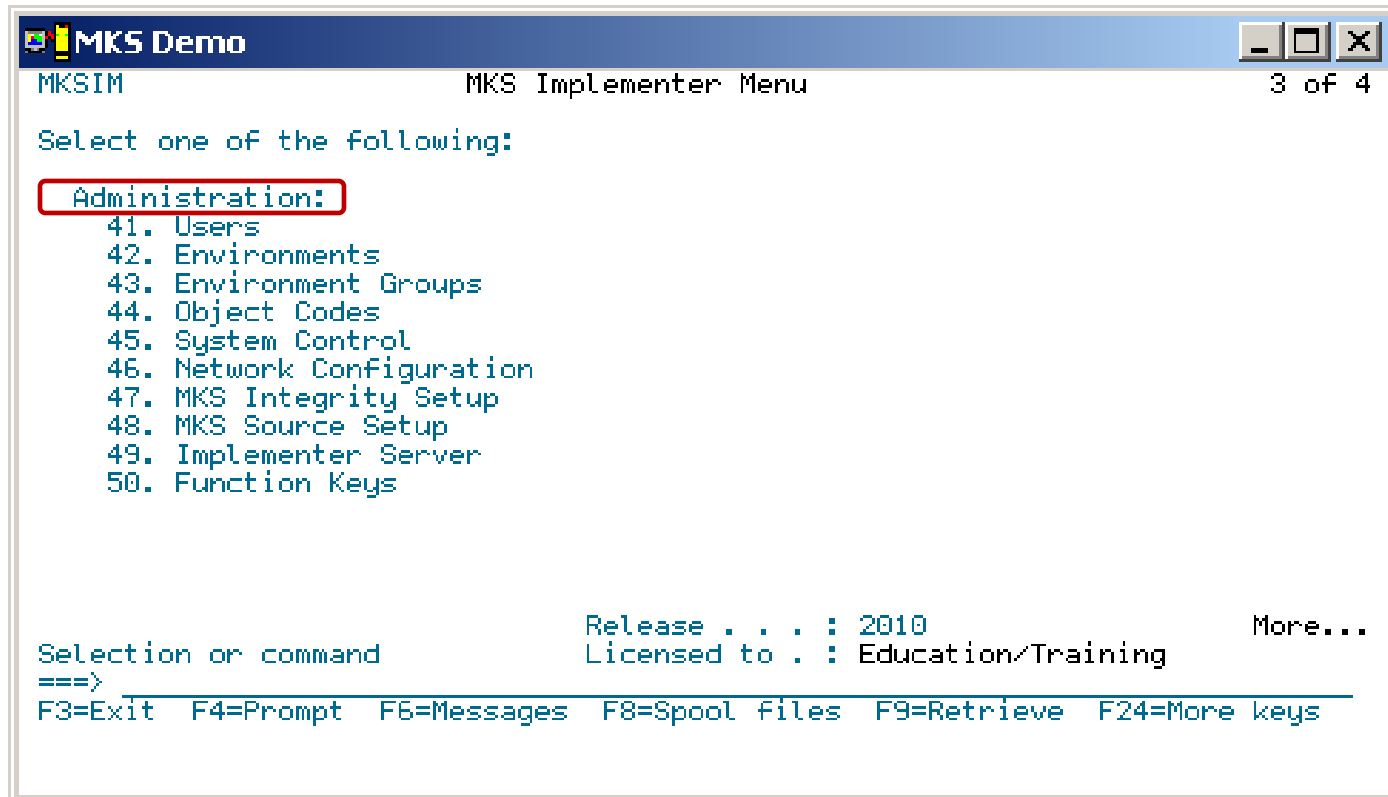

Set up Implementer to reflect your change control process ...

- User profiles
- Object codes
- Environments
- Promotion Scheduling
- Special Commands
- Standard Promotion Path

To access CA 2E in Implementer:

- On the command line, issue the STRxx command, where xx is the abbreviated product name, as follows:
  - To access the CA 2E Menu, type STRCM, and press **ENTER**.
  - To access the CA 2E Receiver Menu, type STRCR, and press **ENTER**.

# Administration Menu

# Examples of Implementer Users

---

- **Implementer Administrator**
  - sets up and maintains Implementer
- **Environment Administrator**
  - has all capabilities to specific assigned production environments
- **Deployment Administrator**
  - performs Move Requests to QA and production environments
  - has no development capabilities
  - can be a single user or part of a group profile
- **Software Engineers**
  - have limited capabilities to production environments
  - can be individual user profiles or part of a group profile

# Work with User Profiles Panel

# Object Codes

---

- An Object Code defines ...
  - The relationship between a source type, object type, and attribute.
  - The command used to create, move, or change an object.
  - When to execute the command.
- Implementer includes predefined object codes
  - ...
  - Review existing object codes and make any necessary changes.
  - Deactivate object codes that are not required by changing the activity flag to 0.
  - Create new object codes, if required.

More...

- An environment is a collection of libraries and IFS directories, and the change management rules associated with those libraries and directories.
- An environment can have any number of libraries, but usually consists of three:
  - Programs, device files, and other objects library
  - Files library (PFs, LFs, DTAARAs)
  - Source library
- Implementer has three environment types:
  - \*PRD
  - \*QAC
  - \*TST

# Environment Types

---

- **\*PRD is the Production environment**
  - Most tightly controlled of the environment types
  - Implementer assumes IBM i security to prevent manual changes
  - Can check out from and promote to a \*PRD environment
  - Promotion to \*PRD environment checks-in (removes the lock)

- 
- \*QAC is the Quality Assurance/Control environment
    - Used for testing software changes
    - Can be controlled tightly like \*PRD or open access like \*TST
    - Can promote to and from \*QAC environment
    - Can reject from \*QAC environment (only environment type that allows rejecting source back to development)
    - Promotion to \*QAC environment does not remove the lock

- 
- **\*TST is the Development/Unit Testing environment**
    - Environment where all development is performed
    - Least controlled of the environment types
    - Implementer assumes that developers have “free reign”
    - Check out to and promote from \*TST environment

---

To define an environment, you specify:

- Libraries that contain source, objects, and files
- Compile library list
- IBM i authorities
- Rules, for example, check out required, compile required, and more

# CM Environment

## Set up standard environments

The screenshot shows a window titled "MK5 Demo" with a sub-header "CHGENV.8". The window contains a list of configuration options for setting up a standard environment. The options are organized into sections: Environment, Library defaults, User source and user program, Check Out, and Create Request. Each option has a value field and a description.

Option	Value	Description
Environment	CACNFDEV	CA Conference Dev Env
Library defaults:		
Model library	LSDEMOMDL	Name, *NONE
Archive versions	3	00-99
User source and user program		
promotion method	1	1=Dependent, 2=Independent
Check Out:		
Related production env	CACNFPRD	Name
Make new MSG/FUN vsn current	Y	Y=Yes, N=No
Create Request:		
Process model list	1 Y	1=Batch, 2=Interactive
Separate model copy step	N Y	Y=Yes, N=No
Objects created first	2 Y	1=Traditional, 2=AllFusion 2E
Save model	N Y	Y=Yes, N=No

# Exercise 4

---

- Promote Object from Development to QA
- Get to CM from within 2E
  - Log in to 2E Model CACNFMDL
  - Go to the 2E Services Menu
  - Select Option 21
  - Select 1. Display Change Management Main Menu
- Go to My Workbench and verify your Object has been checked out.
- Create a Request to move your Display File from Dev to QA.
- Compile your request and check the status of your request.
- Move your request to QA.
- Verify your request has been moved to QA.
