Application Development Business Line Overview

Michael Maggio, VP Product Management and Strategy Business Line Leader

September 2014

Hello, My Name Is...

- Over 25 years building startups from the ground floor:
 - Segue Software, Automated Testing Company
 - Original VP of Engineering
 - Grew company from 3 to 300 people over 7 years
 - Multiple rolls: VP Development, VP BD, SVP Marketing, GM
 - IPO
 - NetMorf: One of the first mobile application companies
 - Founding CEO
 - Grew company from 3 to 80 employees in 18 months
 - Customers included BN.com, Fidelity, Pivotal Software
 - Victim of the Dot-Com crash
 - Newbury Networks: First WiFi based indoor-location company
 - Recruited in as CEO
 - Delivered multiple solutions based on technology: Hospitality, Security, Healthcare
 - Established OEM eco-system with largest WLAN players
 - Sold to one of our OEM's creating a 5X revenue multiple in year 1 (\$10M \$50M)

Never Too Late!!!

Up Next: Building a growth organization with the Application Development Portfolio of one of the largest ISV's in the world!

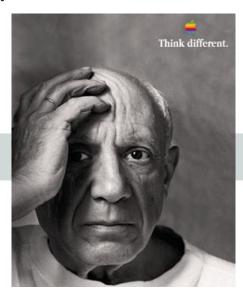

Application Development in a Mainframe World

Application
Development for
the Mainframe

Legacy and Rapidly Declining

Application
Development
leveraging the
Mainframe

New and Growing

- Business Line Strategy:
 - Update our existing products to address the ENTIRE dynamic datacenter
 - Complete the suite and expand access from Mobile to Mainframe
 - Balance investments between existing and new technology
 - New solutions leverage our customer existing investment in CA Products
 - Expand our offerings to integrate existing CA & 3rd Party products
 - Provide a platform to integrate best-of-breed solutions adopted by our customers

MF CSU: A Growth Business – The Dynamic Data Center

- The NEW Market for MF Application Development:
 - Enterprises are differentiating themselves by providing services closer to the customer via mobile and web apps
 - These same enterprises utilize the **Mainframe** as the "System of Record" at the heart of the Dynamic Data Center
 - Application developers are rapidly building new mobile and web applications that access Mainframe systems, their associated databases and application logic
 - The integration of agile-based mobile app development dependent on mission-critical mainframe-based operations is driving the importance of DevOps initiatives within the application development organizations

Source: IDC & CA Research

The High Cost of Application Development

Application development and maintenance takes up 34% of IT budgets:

- Rising cost of labor, both in-house and off-shore development
- Dramatically increasing number and complexity of applications
- Competitive need for rapid delivery and updates to applications

*Source: Gartner Research

Recent leading analyst survey shows:

- Over half of customer-facing and business-critical applications are dependent on the mainframe.
- 70% of CIOs believe application developers are unaware of how their code impacts the mainframe.
- Poorly optimized application interacting with the mainframe drive up MIPS costs unnecessarily.
- Drastic costs reductions occur if developers have visibility on how their code affects the mainframe.

ENTERPRISE APPLICATION DEVELOPMENT REQUIRES CONTINUOUS INTEGRATION AND ORCHESTRATION BETWEEN DEVELOPMENT TOOLS TO PROVIDE *VISIBILITY, TRACEABILITY* AND *MANAGEMENT* ACROSS MOBILE, CLOUD, DISTRIBUTED AND MAINFRAME ENVIRONMENTS

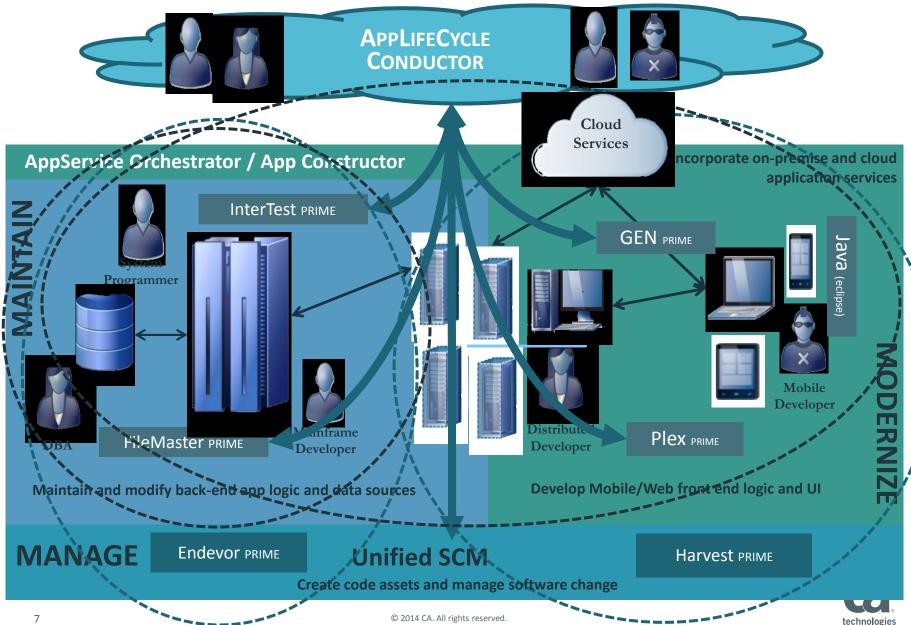

AppDev Migration from MF to Dynamic Data Center

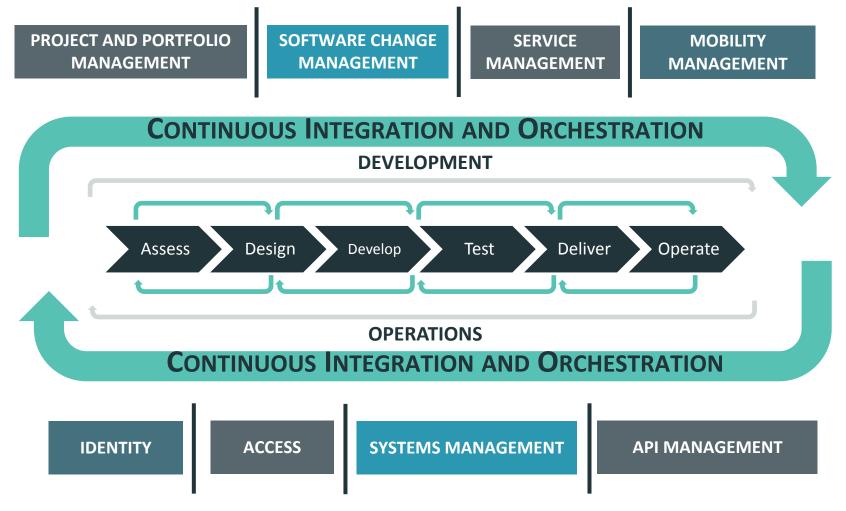

RISKS: KNOWLEDGE LOSS - AGING WORKFORCE DRAMATIC RISE IN LOAD FROM MOBILE **DATA INTEGRITY CHALLENGES** Cloud Services Bank Programmer RISKS: **FEATURES Lainframe** AVAILABILITY OF DATA CENTER RESOURCES Developer **Banking Application ACCESS CONTROL AND SECURITY CHALLENGES** Cobol Weld Service RISKS: **AUDITABILITY OF CHANGES** ACCOUNTABILITY FOR INTRODUCTION OF DEFECTS ABILITY TO IDENTIFY BOTTLENECKS AND FAILURES

The CA Application Development Solution

Continuous Integration and Orchestration of DevOps is a Critical Enabler of the Application Economy

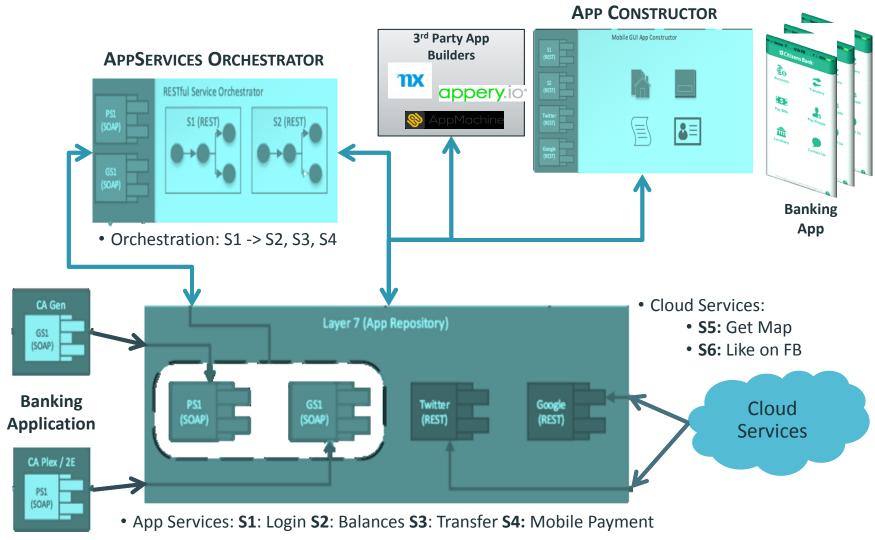

Enhanced AppDev PRIME Offerings

- **FileMaster** *PRIME File Management, Data manipulation, and Data Creation*
 - Eclipse UI access to z/OS data files, IMS, & DB2, Futures: Oracle, SQL Server
 - Integrated Data Masking Capabilities (Grid Tools)
- InterTest PRIME Application Analysis and Debugging for System Z Applications
 - Eclipse UI integrating InterTest & SymDump
 - Improved Installation and Enhanced Performance for SymDump
- Endevor PRIME Software Change Management and Deployment on System Z
 - Eclipse GUI interface with Mobile Software Change (Package) approval
 - LISA RA integration for cross-enterprise release automation with mainframe assets
- Harvest PRIME Software Change Management and Builds for Distributed Systems
 - LISA RA integration for cross-enterprise release automation with mainframe assets
 - Distributed builds & "package" creation to align Harvest with Endevor functionality
- Gen PRIME Model Based Application Generator from Mobile to Mainframe
 - Delivery of model development through Eclipse-based Gen Studio
 - Extended support for publishing to App Service Repository
- Plex PRIME Model Based Application Generator for Distributed Systems
 - Extended support for publishing to App Service Repository

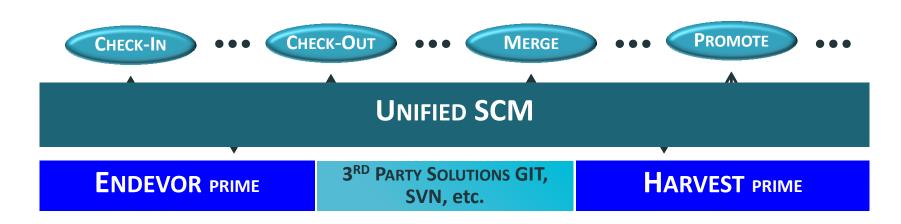

AppServices Orchestrator and App Constructor

Unified SCM

- Managing Software Assets from Mainframe to Mobile
 - Normalized SCM functions for managing software assets across the enterprise
 - Full support for software audit, lifecycle management, and XXX
 - Common Integrated User Interface (Eclipse, HTML, IDE Plugin)
 - UX Emphasis towards:
 - Platform agnostic
 - Ease of use; lighting-fast adoption
 - Industry known terminology
 - Integration with high-use, open source tooling
 - Preserves the investment in current SCM solutions

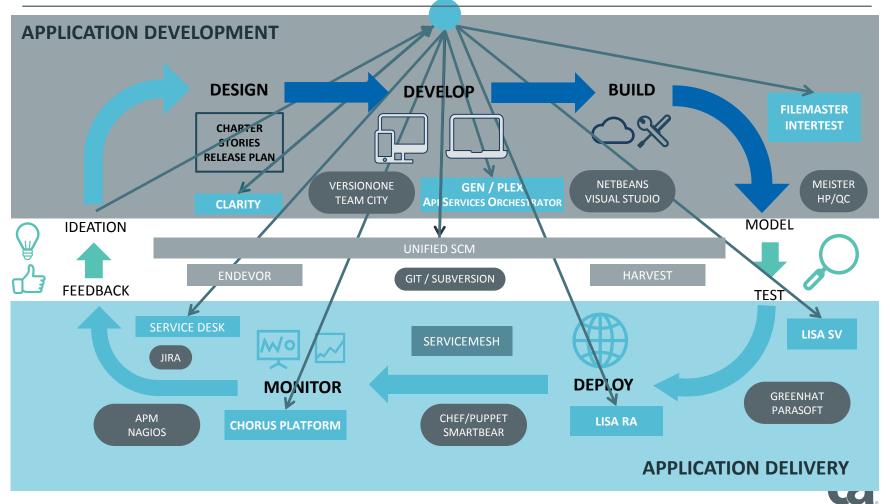

App Lifecycle Conductor

Continuous Integration And Orchestration Between Application Development Technologies To Visualize, Control And Manage Flow Across The Development And Delivery Process

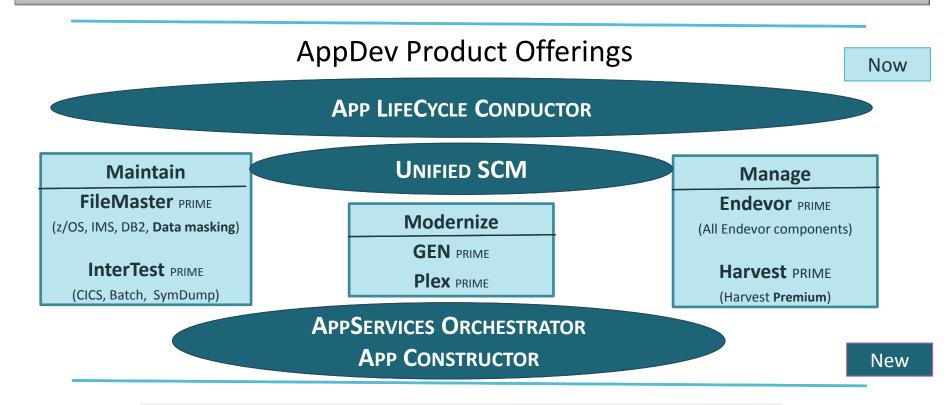

APP LIFECYCLE CONDUCTOR

technologies

Application Development Business Line

CA's Application Development business line delivers a comprehensive solution for application developers to *build and maintain* critical business applications, *manage* modifications and enhancements over time and *modernize* them to meet the mobilization and consumerization trends of today's agile IT organizations.
