

Q&A Session for DevTest Community Webcast

Date: Thursday, October 13, 2016

---

-Suresh Jayaraman - 11:13 AM

Q: When we do import non-relational datasources (like XSD) how would this Child reference apply there?

-Melanie Giuliani - 11:34 AM

A: the child reference is off of the root, so whenever we do the import there is always going to be an additional table which is the actual Shredder table which becomes the parent tables. the child tables are all the additional tables from the XSD.-

-amit agr - 11:16 AM

Q: what does Generator screen signifies?

-Melanie Giuliani - 11:35 AM

A: the generator screen is for when you create your data pool in the datamaker client where you can do the data generation, etc. the data pool is the equivalent to the generator screen. -

---

-Karl Miller - 11:32 AM

Q: Could you use the JSON for NoSQL DBs such as MongoDB?

-Melanie Giuliani - 11:37 AM

A: yes! if you have non-relational JSON files you can use Shredder to do this. -

---

-amit agr- 11:34 AM

Q: How we can have data from excel sheet and use it in my VSI or VSM ?

-Melanie Giuliani - 11:38 AM

A: Don does not have experience on the mainframe side but we will follow-up on that one-

---

-Suresh Jayaraman - 11:35 AM

Q: Another question.. Can we export all xml to 1 file instead of 1 per file ?

-Melanie Giuliani - 11:40 AM

A: this question has come up before. as of right now i don't believe we can do this. we have had this request, though, so it's on the roadmap for a future release and we are working towards it.-

---

-Ashutosh Satyam - 11:39 AM

Q: If you register XML instead of XSD do you still need to import data?

-Melanie Giuliani - 11:40 AM

A: no - you don't. you can take the elements from the XML and create the relational data. so you could just import the XML without an XSD-
