

# Why upgrade to Spectrum 10.2?

The top five reasons are...

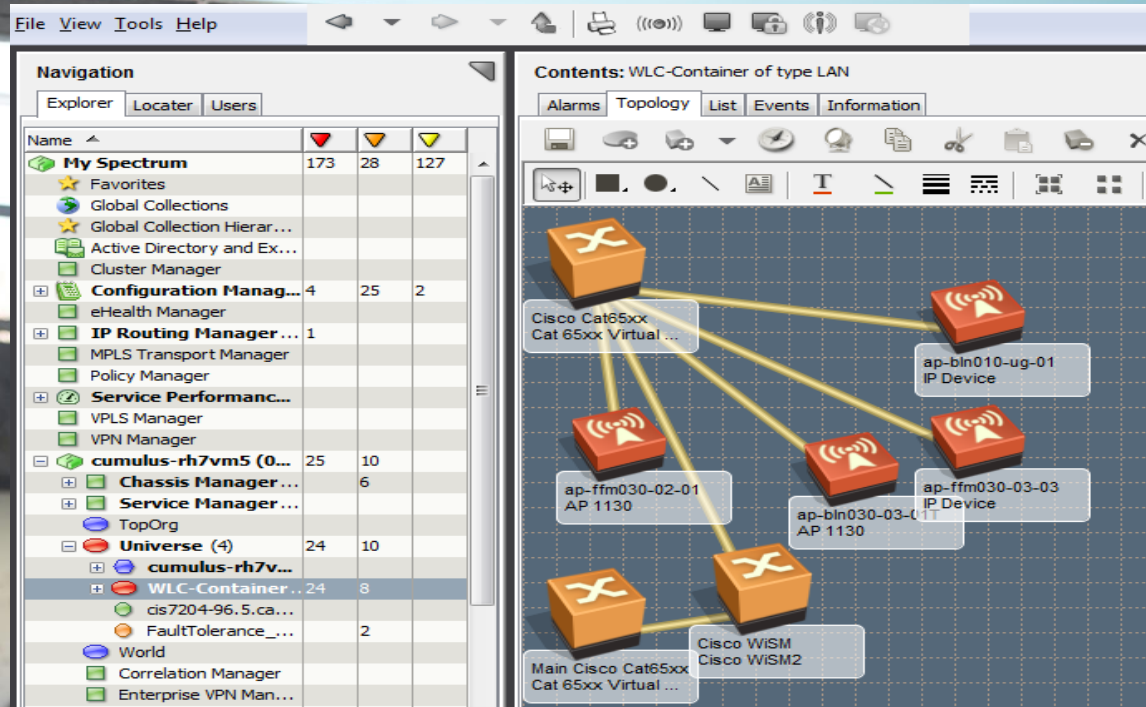

# #1 WebClient Topology View

*A new Topology View has been added to the WebClient. Operators now have a topology view while managing alarms and triaging problems.*

# #2 Wireless LAN Controller Manager

*Spectrum will discover and monitor Cisco and Aruba Wireless LAN Controllers (WLC) and the connected Access Points (APs).*

# #3 64-bit Architecture

Spectrum SS KPI	Normal	Peak
Traps	100/sec	1000/sec
Events	100/sec	1000/sec
Alarms	1 update/sec	10 /sec for a period of 1 minute
Devices	10K	
Models	1 Million	
SS Activation	< 30 mins	

*CA Spectrum 64-bit reduces the time and costs associated with administering multiple management consoles by supporting tens of thousands of devices and millions of models; drastically improving scalability while simplifying staff management.*

# #4 Bidirectional Integration with CA Unified Infrastructure Management

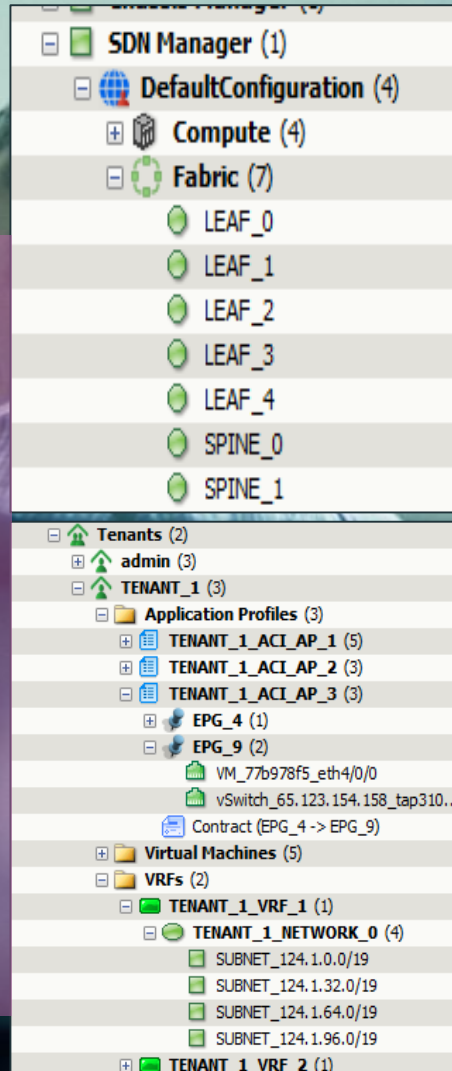

*Enable management of your entire IT environment through a single solution.*

# #5 Support Cisco ACI

*CA Spectrum will discover, model and show Cisco ACI physical, virtual and logical entities in a single console.*

*Supporting alarms, traps, events, fault and health scores for root cause and fault isolation.*

# CA Communities

communities.ca.com

## CA Spectrum has a NEW Community!

Join the thousands of CA Spectrum users from across the globe to ask hard questions and share best practices.

This community is open to all users at all levels and is constantly moderated by expert CA Spectrum staff and users to help provide timely, thoughtful answers to your questions.

### Getting Started

1. Create a profile
2. Follow the IM Community
3. Follow your peers
4. Search for awesomeness
5. Vote of enhancements
