CA Test Data Manager

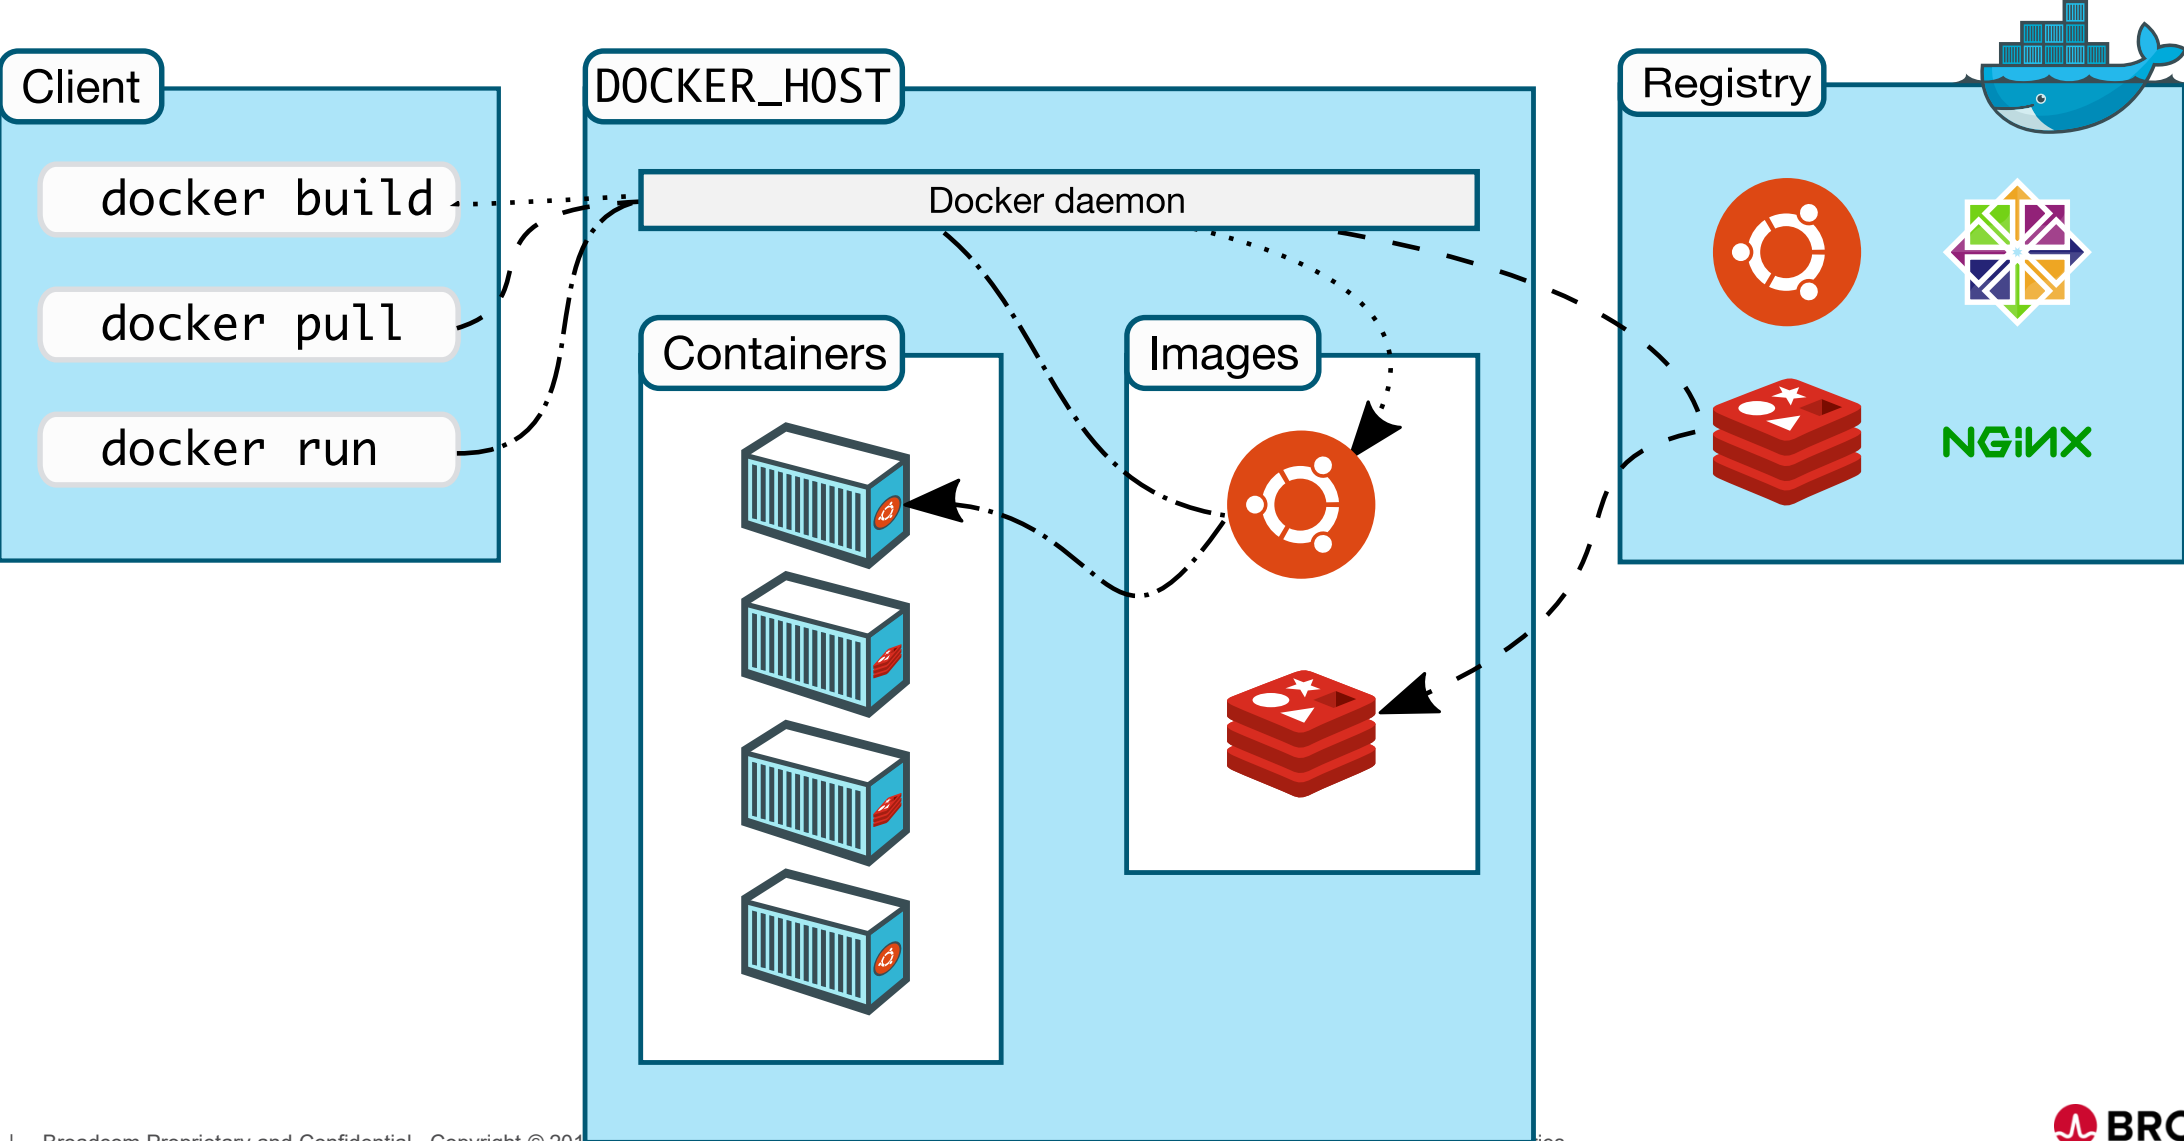

Business Benefit	Key Capabilities	Personas
Improve Tester efficiency Improve test data coverage Reduce infrastructure costs Data protection Improve test data delivery	Discover Subset Mask Generate Clone & Condition Find & Reserve Self-Service Database Virtualization	Developer / Tester Test Data Engineer Compliance Auditor Systems Engineer

TDM 4.7 Marquee Features

Feature	Description	Business Value	Customer Value
TDM Portal on Docker (Linux Support)	Allow customers to use TDM on Linux without using ANY Windows boxes.	Expand to customers on non-Windows platforms including customers interested in cloud deployments.	Customers can lower TCO by eliminating Windows licenses and lower operation cost thanks to easier automation. Easier disaster recovery thanks to state-less containers.
PostgreSQL Support	PostgreSQL support added to synthetic data generation, data model discovery, PII profiling and masking in portal.	The ability to offer key TDM functionality on one of the most widely adopted data sources.	Customers can leverage data discovery, profiling, masking and synthetic data generation functionality also on PostgreSQL.
Find & Reserve	Extending search capabilities by supporting comparison operators for numeric and date/time data types.	These improvements answer highly demanded feature enhancement.	The added value of Find & Reserve functionality is increased by supporting richer queries.
Section 508 Compliance (VPAT)	Improving accessibility of our tester UI to help users with impaired vision.	Delivering an important customer commitment.	Customers are compliant with regulations (Section 508).
