

## Q&A Session for DevTest Community Webcast

Date: Thursday, April 27, 2017

---

-Jianhua Dong - 11:33 AM

Q: Is there a way for users to change their password?

-Koustubh Warty - 11:44 AM

A: For default Devtest ACL - the admin has to do it. But for AD/LDAP - that will be done outside of DevTest. Dan is showing a demo of this right now -

---

-Rajesh Singh - 11:46 AM

Q: HI, By default password will neer expired ?

-Melanie Giuliani - 11:46 AM

A: Dan doesn't believe it will, but will double check - he will leave the answer as a comment on the webcast recap & event on the communities. this info may also be in the FAQ.-

---

-Doron Yerushalmi - 11:46 AM

Q: Can we set permission on a project level?

-Melanie Giuliani - 11:47 AM

A: permissions are set per user, not per project-

-Surya Anil Kumar Suravarapu - 11:47 AM

A: There are ways to handle this.. you can create a custom role for users of a project and set permissions accordingly.. but If you are talking about DevTest project level.. No-

-Jianhua Dong - 11:47 AM

Q: sems that every user knows the password of adminnistrator is "admin", as the real administrator, should I change the password for the admin user?

-Melanie Giuliani - 11:48 AM

A: yes you should definitely do this, even if you don't use the LDAP integration, it's recommended to change the default password and give each admin their own user-

---

-Rajesh Singh - 11:47 AM

Q: Hi, Can we create group account or not as per system log on ?

-Melanie Giuliani - 11:48 AM

A: Hi Rajesh - can you clarify a bit?-

-Rajesh Singh - 11:49 AM

Q: group account - means multiple user added in one group and access same for login in their system

-Melanie Giuliani - 11:49 AM

A: If you're using a remote desktop, you can log in with the same user, but only one person is going to be using that. as of now you can use workstation or portal from your own machine without being charged, so it's not necessary to have an essential one. Dan will send you more scenarios on this -

---

-Rajesh Singh - 11:51 AM

Q: how to manage this in linux system ?

-Melanie Giuliani - 11:51 AM

A: this would still be done through portal which can be accessed from any machine through any internet browser-
