

CA IDMS™ Version 19.0

New Features and Enhancement

May 5, 2020

Introductions

- Sheila Miller – Product Manager
- Nakesha Newbury – Product Owner
- Mike Picchioni – Software Engineer
- Rick Rhodes – Software Engineer

Disclaimer

Certain information in this presentation may outline CA's general product direction. This presentation shall not serve to (i) affect the rights and/or obligations of CA or its licensees under any existing or future license agreement or services agreement relating to any CA software product; or (ii) amend any product documentation or specifications for any CA software product. This presentation is based on current information and resource allocations as of May 2020 and **is subject to change or withdrawal by CA at any time without notice. The development, release and timing of any features or functionality described in this presentation remain at CA's sole discretion.**

Notwithstanding anything in this presentation to the contrary, upon the general availability of any future CA product release referenced in this presentation, CA may make such release available to new licensees in the form of a regularly scheduled major product release. Such release may be made available to licensees of the product who are active subscribers to CA maintenance and support, on a when and if-available basis. The information in this presentation is not deemed to be incorporated into any contract.

THIS PRESENTATION IS FOR YOUR INFORMATIONAL PURPOSES ONLY. CA assumes no responsibility for the accuracy or completeness of the information. TO THE EXTENT PERMITTED BY APPLICABLE LAW, CA PROVIDES THIS DOCUMENT "AS IS" WITHOUT WARRANTY OF ANY KIND, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NONINFRINGEMENT. **In no event will CA be liable for any loss or damage, direct or indirect, in connection with this presentation, including, without limitation, lost profits, lost investment, business interruption, goodwill, or lost data, even if CA is expressly advised in advance of the possibility of such damages.**

Agenda

- CA IDMS Current State
- CA IDMS 19.0 Upgrade Solution
- MQ Adaptor
- Dynamic Storage Pool Expansion
- Sysgen Enhancements
- General Updates
- Q&A

CA IDMS Current State

CA IDMS™ Current State Snapshot

Marquee Features

Delivered

- **SQL Virtual Keys** network sets as referential constraints, simplified access
- **SQL Resource Limits** control runaway queries and updates to make modernization more cost effective
- **Caching Improvements** SQL INSERT Statements, Caching a percentage of a file
- **Zowe CLI (Command Line Interface)** enable automated scripting of CA IDMS/DC commands
- **Performance and monitoring statistics** captures UOW ID / enables end-to-end monitoring
- **CA ADS zIIP Eligibility** enables ADS runtime to run on zIIP specialty engines
- **CICS Dynamic Tracing for DML & SQL** improved debugging for quicker problem solving and analysis
- **Eliminate REORG block size limitations** internal improvements to reduce errors and prevent ABENDS
- **Service update PAX** CA IDMS 19.0 service update
- **MQ Adapter** connect to Z/OS QM, on-line applications, trigger monitor, RRS
- **Sysgen Avoid the Surprises** automated alert and new command to view pending changes; enhanced summary reporting
- **Dynamic storage pool expansion** automatically expand storage pools based on pre-defined limits

Planned

- **REST API** real-time monitor, systems management, analytics, and modern dashboard enablement
- **DML Pre-Compiler** including synonym and version of an IDD record for debugging
- **SQL data exception messages** provide more details when receiving Data Exception messages with ability to debug problems with SQL query
- **Mapping support for output edits** protecting sensitive data to meet security compliance regulations
- **IBM z/OSMF** standard software install, deployment, and configuration
- **CA IDMS Server 19.0** new software build, installation, windows fixes
- **Security Technology Implementation Guide (STIG)** security best practices
- **TechDocs** continued improvement
- **Education** enhancements and expanded offering

Under Consideration

- **REST APIs** ongoing
- **Zowe** ongoing functionality, plug-in
- **ETL Anonymization & masking** of PII sensitive data to meet GDPR security requirements (analysis)
- **SQL Enhancements** SQL Describe Command, Locking SELECT FOR UPDATE, SQL storage pools
- **Quick Bridge** certified on current Windows OS
- **Output of CA IDMS & Data** Ability to extract CA IDMS data in CSV and XML formats
- **Automated REORG / High Availability** REORG an area without risk of human error and (near) zero downtime or interruption to their business.
- **MF Operational Intelligence (MOI) & Machine Learning (ML)** CA IDMS integration
- **IBM Z** pervasive encryption

End of Service (EOS) Announcement – December 30, 2019

- **EOS – December 31, 2020**

- CA IDMS for z/OS Plus 18.5
- CA IDMS Visual DBA for z/OS 18.0, 17.0, and 16.0

- **Upgrade to Latest Version**

- CA IDMS for z/OS Plus 19.0
- CA IDMS Visual DBA for z/OS 18.1

End of Service Announcement for CA IDMS 18.5 for z/OS and CA IDMS™ Visual DBA 18.0, 17.0, and 16.0 for z/OS

December 2019

To: CA IDMS Customers

From: The CA Technologies CA IDMS Product Team

Subject: End of Service Announcement for CA IDMS 18.5 for z/OS and CA IDMS™ Visual DBA 18.0, 17.0, and 16.0 for z/OS

CA Technologies, a Broadcom Company, is continually working to improve our software and services to best meet the needs of our customers. In accordance with the terms, guidelines, details and parameters of

Broadcom's standard support program which is documented in the "Working with CA Support" guide located at: <https://casupport.broadcom.com/product-information.html>, please consider this email your written notification that we are discontinuing technical support for CA IDMS 18.5 for z/OS and CA IDMS™ for z/OS Visual DBA 18.0, 17.0, and 16.0 for z/OS effective December 31, 2020. This will allow our Development organization to more effectively focus its resources and add value to the current release of CA IDMS. After December 31, 2020, CA Technologies will continue to make self-service support available until the end of your current maintenance term.

At this time, we encourage you to plan for the migration to CA IDMS 19.0 for z/OS and CA IDMS Visual DBA 18.1 for z/OS as soon as possible, so you can take full advantage of the features and enhancements this release has to offer. For information on CA IDMS, please visit the CA IDMS pages at [CA Support](#).

As CA Technologies would like to make your upgrade to CA IDMS 19.0 and CA IDMS for z/OS Visual DBA 18.1 for z/OS as straightforward as possible, we are offering the following:

- The latest supported Version/Release of CA IDMS, at no charge, as long as you have an active maintenance contract for CA IDMS. Documentation to help you prepare for your upgrade to the new Version/Release can be viewed on the CA IDMS pages at [CA Support](#).
- Upgrade assistance from qualified local CA partners. For more information and a list of partners in your area, please contact your local [CA Channel Partner Group](#) office.
- Should you need any assistance with developing a migration strategy or performing the actual migration, CA Services can help. For more information on CA Services and how you can leverage our experience, please visit [CA Services](#).

If available, CA Extended Support, a CA Technologies support offering, that extends support for CA Technologies software product versions or releases that have reached End of Service. CA Extended Support may be available for a limited time after the End of Service date. Please visit our [CA Support](#) website for more information.

Your success is very important to us, and we look forward to continuing our successful partnership with you.

New CA IDMS 19.0 Upgrade Solution

Mike Picchioni

CA IDMS 19.0 Upgrade Solution

Delivered

Use Case:

As an IDMS Admin I need a **service update** for CA IDMS 19.0 which will simplify and accelerate the upgrade process to the latest release enabling me to focus on other priorities.

Simplify

- ✓ Lands easier on the customer
- ✓ Streamlines experience by eliminating a complicated and lengthy upgrade process
- ✓ Quicker time to value in realizing product currency and ability to leverage the latest product capabilities

CA IDMS 19.0 Upgrade Solution

- Provides currency out of the box
 - Eliminates the need to apply over 400 PTFs & HoldData
 - Based on CA RS 1912
 - Includes all maintenance published up until 12/2019

New IDMS 19.0 PAX file

- New PAX file - DVD00000000001941.pax.Z
- On support.Broadcom.com Release 19.0 Service Pack S1912
- All PTFs up to and including CARS1912
- For upgrades and new installs prevents needing to install hundreds of PTFs and perform holddata actions

CA IDMS MQ Adapter

CA IDMS MQ Adaptor

Delivered

Use Case:

As a CA IDMS application developer, I need the ability to make calls to IBM MQ Series directly from CA IDMS/DC (COBOL, ADS...) programs to further enable integration capabilities.

Open

- ✓ Extend your business to support mainframe to mobile initiatives and beyond
- ✓ Included within the base product eliminating the need for additional tooling
- ✓ Further enabling integration with reduced costs

CA IDMS MQ Adaptor

- Supports message queuing and trigger monitoring
- Streamlined and improved end-to-end integration
- Faster, more reliable

CA IDMS MQ Adapter

- CA IDMS MQ Adapter support now integrated into CV processing
- CA IDMS MQ Adapter intercepts only commands that need intervention; other commands and parameters are passed through to IBM MQ
- Optional trigger monitor integrated in CA IDMS

IDMS MQ Adapter

- Same as IBM Batch MQ API
 - E.g. MQCONN (QMgrName, Hconn, CompCode, Reason)
- Link IDMSMQI stub with calling program
- Dynamically call CSQB or MQ name
 - ReLink IDMSMQI with alias names
 - Define each alias as program to IDMS-DC
 - Programs Link or transfer control to alias name
 - CSQB names documented by IBM
 - E.g. CSQBCONN instead of MQCONN

Supported Languages

- COBOL
- ASSEMBLER
- PL/I
- ADS

ADS BIFs

- A new BIF for each supported MQ API

- Each BIF is the same name as the API

- Example:

MQOPEN(ConnectionHandle, ObjectDescriptor, Options, ObjectHandle, CompCode, RsnCode)

ADS BIFs

- A new BIF for each supported MQ API
 - Each BIF is the same name as the API

- Example:

MQOPEN(ConnectionHandle, ObjectDescriptor, Options, ObjectHandle, CompCode, RsnCode)

SYSGEN MQ

- Requires new MQ statement
 - Specify the queue manager name
 - Specify enabled/disabled
- For example,

```
ADD MQ STATUS ENABLE QUEUE MANAGER IDM2 .
```

CA IDMS MQ Sessions

- An CA IDMS MQ session is an internal structure used by DC to track open objects, units of work, and to reserve a subtask
- A session is explicitly created on MQCONN and freed on MQDISC.
- A session is implicitly created on the first MQOPEN and freed when there are no open objects and no uncommitted work.
- Active sessions are freed at task termination.
- A session reserves a subtask

Trigger Monitor

- RHDCD0MQ – Line Driver/Trigger Monitor
- Issues an MQOPEN on the Initiation queue for each MQTRIGGR PTE
- Waits for a Trigger Message to arrive
- Once a Trigger Message arrives
 - Gets taskcode to invoke from the trigger message
 - Comes from the APPLICID field defined in the IBM MQ Process
 - MQTM fields of trigger message put in PTE and parm address set to PTE version of MQTM to be passed to started program
 - Starts a BULK PTE to run the task
- Issues an MQCLOSE for each queue during shutdown

Trigger Monitor

- Requires new MQ line
 - Type is MQ
- Requires new PTE type MQTRIGGR
 - Must specify the initiation queue
- The line must have BULK pterms defined
- Can have multiple MQTRIGGR PTEs for different initiation queues

Trigger Monitor: Sysgen

- DCMT V LINE mq-line OFF
 - Disables Trigger Monitor for all MQTRIGGR pterms
- DCMT V LINE mq-line ON
 - Enables Trigger Monitor for all MQTRIGGR pterms that were not individually varied offline
- DCMT V PTERM mq-pterm ON/OFF
 - Enables/Disables Trigger Monitor for the individual MQTRIGGR pterm

Trigger Monitor: Polling

- When Trigger Monitoring is enabled, but cannot connect to the defined initiation queue, the trigger monitor will periodically retry to connect
- The time between polling attempts, in seconds, is defined on the MQ LINE statement in SYSGEN with the clause
 - POLLING INTERVAL IS n
- Polling Interval is 0 disables polling. This is the default
- DCMT D LINE/PTERM - New PTERM status for MQTRIGGR PTERMS
 - New status: POLL - Indicates PTERM is polling
- If a PTERM is POLLing, it can be disabled by varying the PTERM offline

DCMT Commands

- DCMT D MQ
 - Displays the SYSGEN MQ definitions and the Runtime MQ definitions
- DCMT D STATistics SYStem
 - Display system-wide statistics, including statistics for the MQ component
- DCMT D STAT MQ
- DCMT D STAT MQ QUEUES
- DCMT D STAT MQ QUEUE <queue-name>

DCMT Commands

- DCMT V MQ ENABled
 - Turns on MQ processing
 - System must be started with MQ defined in Sysgen
- DCMT V MQ DISabled (QUlesce/FORce)
 - Turns off MQ processing
 - FORce disables MQ immediately. QUlesce lets current running MQ sessions finish. New MQ sessions are not allowed.
 - QUlesce is the default
- DCMT V MQ Queue MANager
 - Changes the run time queue manager the system is connected to
 - MQ must be disabled before varying the queue manager

Quiesce Processing

- DCMT V MQ DISABLE
 - No new sessions are allowed
 - Existing sessions are allowed to finish
 - MQ commands with Fail-if-quesce option get an error
 - Subtasks disconnected when freed
 - MQI disabled when last session ends
- IBM MQ quiesces
 - Same as above except occurs when we detect MQ is quiescing
 - We don't disable MQI when the last session ends
 - New sessions are attempted
 - Quiesce state ends when new session connects

MQ Statistics

- MQ Statistics displayed on DCMT D STATISTICS SYSTEM screen
- Example:

```
MQ:          133 Total MQI calls          138 Total MQ calls
           45 MQOPENs                    42 MQCLOSEs
           22 MQPUTs                      23 MQGETs
Subtasks
    1 HWM
    4 Threshold
    0 Times Exceeded
```

MQ Statistics

- Total number of MQOPENs, MQCLOSEs, MQPUTs, and MQGETs
- Total MQI calls – Number of calls of all types made through the IDMS MQ API
- Total MQ calls – Total number of calls of all types made including those through the IBM MQ API
- Subtasks
 - HWM: High Water Mark. The highest number of utility subtasks allocated to MQ.
 - Threshold: the total number of utility subtasks that can be allocated to MQ.
 - Times exceeded: the number of times a utility subtask was needed but could not be allocated because none were available. If this occurs the number of subtasks should be increased.

MQ Statistics

- DCMT D STA MQ
 - Displays same MQ stats as DCMT D STA SYS
 - Only MQ system stats
- DCMT D STA MQ QUEUES
 - Display same stats as DCMT D STA MQ
 - Plus Queue Name Stats for each accessed queue
- DCMT D STA MQ QUE queue-name
 - Display queue name stats for specified queue

Queue

MQT2.DELLY01.QUEUE

1 MQOPENS

1 MQPUTs

1 MQCLOSEs

2 MQGETs

Summary

- IBM MQ support now integrated into IDMS
- Supports all MQ commands
- Has a built-in trigger monitor

CA IDMS MQ Adaptor

➤ Questions?

Dynamic Storage Pool Expansion

Rick Rhodes

CA IDMS Dynamic Storage Pool Expansion

Delivered

Use Case:

As a CA IDMS systems DBA, I need CA IDMS to automatically increase storage for a specific storage pool so that I can allow for occasional extra storage usage to be satisfied without DBA interaction.

Automation

- ✓ Provides automation and ease-of-use
- ✓ Simplifies systems management and tuning
- ✓ Frees up DBA to focus on other priorities

CA IDMS Dynamic Storage Pool Expansion

- Helps tolerate spikes in storage pool usage without the system becoming short on storage
- Storage pool size adjustments are made without updating and refreshing the SYSGEN
- Performance degradations are reduced which results in the improvement of throughput and ease of use.

Dynamic Storage Pool Expansion

- CA IDMS can dynamically expand the storage allocation for a storage pool
- Storage pools can be expanded by 50% of the original size of the pool
- The 50% storage pool expansion can occur up to 4 times
- Dynamic Storage Pool Expansion can be enabled for any **XA** storage pool

Dynamic Storage Pool Expansion Benefits

- Helps tolerate spikes in pool usage without the system becoming short on storage
- Pool size adjustments are made without updating and refreshing the SYSGEN
- Performance degradations are reduced resulting in improved ease of use

Dynamic Expansion Sysgen Syntax

- XA STORAGE POOL statement clause

```
                SYSGEN 19.0  NO ERRORS    DICT=SYSTEM
DISPLAY XA STORAGE POOL 128.
*+  ADD XA STORAGE POOL 128
*+   SIZE IS 6000
*+   CUSHION IS 128
*+   NOPGFIX
*+   RELOCATABLE THRESHOLD IS NO
*+   CONTAINS TYPES ( USER USER-KEPT )
*+   DYNAMIC EXPANSION IS ON
*+   .
```

Dynamic Expansion Sysgen Syntax

- SYSTEM statement XA STORAGE POOL clause

```
*+ TRANSACTION SHARING IS OFF
*+ TRACE SAVE OFF TABLE SIZE IS 4 MB
*+ UNDEFINED PROGRAM COUNT IS ( 300 10 ) FOR (ALL)
*+ UPDATE NOLOCK
*+ USERTRACE ON ENTRIES = 250
*+ XA PROGRAM POOL IS 500
*+ XA REENTRANT POOL IS 5000
*+ XA STORAGE POOL IS 21000
*+ DYNAMIC EXPANSION IS OFF
*+ .
```

Dynamic Storage Pool Expansion

- DC015008 message is issued when an XA storage pool is expanded:

IDMS DC329013 V218 T29 Startup resynchronization complete

IDMS DC074100 V218 T0 ?

IDMS DC015008 V218 *** Dynamic Pool Expansion *** 1 of 4 Storage pool 128: 0003000 K added
IDMS DC015008 V218 *** Dynamic Pool Expansion *** 2 of 4 Storage pool 128: 0003000 K added
IDMS DC015008 V218 *** Dynamic Pool Expansion *** 3 of 4 Storage pool 128: 0003000 K added
IDMS DC015008 V218 *** Dynamic Pool Expansion *** 4 of 4 Storage pool 128: 0003000 K added

- DC015008 message includes a count of how many expansions have occurred

Dynamic Storage Pool Expansion

- DC015009 message is issued if a GETMAIN for the SCT or pool storage fails:

IDMS DC015009 V218 *** Dynamic Pool Expansion *** Could not get 0003000 K to expand storage pool 128

- Task requesting storage for a failed expansion attempt will incur SOS treatment

Dynamic Storage Pool Expansion

- SYSGEN can be updated, generated, and refreshed to turn expansion on or off:

VARY SYSGEN REFRESH ALL STORAGE POOLS .

*** Vary Sysgen request ***

No Lines nor Pterms were added

No storage pool was added/expanded

Storage pool 128 Dynamic Expansion is off

Storage pool 129 Dynamic Expansion is on

No program pool was added/expanded

V218 ENTER NEXT TASK CODE: CA IDMS release 19.0

Dynamic Storage Pool Expansion

- Storage pool expansions are retained for the life of the Central Version
- Expansion will not occur if a requested storage amount exceeds 50% of the pool
- SOS conditions and behavior will not occur until a pool has expanded four times
- Storage cushions may be utilized if additional expansions are still possible

Dynamic Storage Pool Expansion

- With dynamic expansion, available expansions are a different kind of cushion
- Will allow a storage cushion to be utilized to avoid causing a pool expansion
- Storage cushion utilization can minimize production of DC015008 messages
- After 4 expansions, cushion infringement produces expected SOS conditions

Dynamic Storage Pool Expansion Example

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	4K	124K		0	NO	US,UK

- 5900K storage acquired

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5912K	5912K		0	NO	US,UK

- Cushion is utilized without going SOS condition 0

Dynamic Storage Pool Expansion Example

- 50K storage acquired

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5964K	5964K		0	NO	US,UK

- With expansions available, cushion is utilized

Dynamic Storage Pool Expansion Example

- 2900K storage acquired

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5964K	5964K		0	NO	US,UK
128	3AEF9000	3000K	128K	2904K	2904K		0	NO	US,UK

- First expansion occurs

Dynamic Storage Pool Expansion Example

- 2900K storage acquired again

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5964K	5964K		0	NO	US,UK
128	3AEFB000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B1EA000	3000K	128K	2904K	2904K		0	NO	US,UK

Dynamic Storage Pool Expansion Example

- 2900K storage acquired again, and again

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5964K	5964K		0	NO	US,UK
128	3AEFB000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B1EA000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B4D9000	3000K	128K	2904K	2904K		0	NO	US,UK

Dynamic Storage Pool Expansion Example

- 2900K storage acquired again, and again, and again

POOL	ADDRESS	SIZE	CUSHION	INUSE	HWM	TIMES	SOS	PFIX	CONTAINS
128	37353000	6000K	128K	5964K	5964K		0	NO	US,UK
128	3AEFB000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B1EA000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B4D9000	3000K	128K	2904K	2904K		0	NO	US,UK
128	3B7C8000	3000K	128K	2904K	2904K		1	NO	US,UK

Fourth expansion has occurred. Cushion is involved, producing an SOS condition:

IDMS DC015007 V218 POOL 128: SOS CONDITION 0, SZ=2969728, T=STG, P=STORAGE

Dynamic Storage Pool Expansion

➤ Questions?

SYSGEN Enhancements to Avoid Surprises

CA IDMS Sysgen Enhancements

Delivered

Use Case:

As a CA IDMS DBA, I need to know before I begin to update my systems configuration via SYSGEN that there are pending changes

Automation

- ✓ Avoid surprises – eliminating accidental updates
- ✓ Provides more intelligent information to the DBA
- ✓ Improves productivity

CA IDMS Sysgen Enhancements

- Automatic alert message
- Ability to see updates that have not been generated
- Enhanced generation summary

SYSGEN Enhancement to Avoid Surprises

- As system currency is established in the SYSGEN compiler, a new message will appear if there are any ungenerated entity changes:

DC601273 UNGENERATED CHANGES - ISSUE "DISPLAY CHANGES" TO VIEW

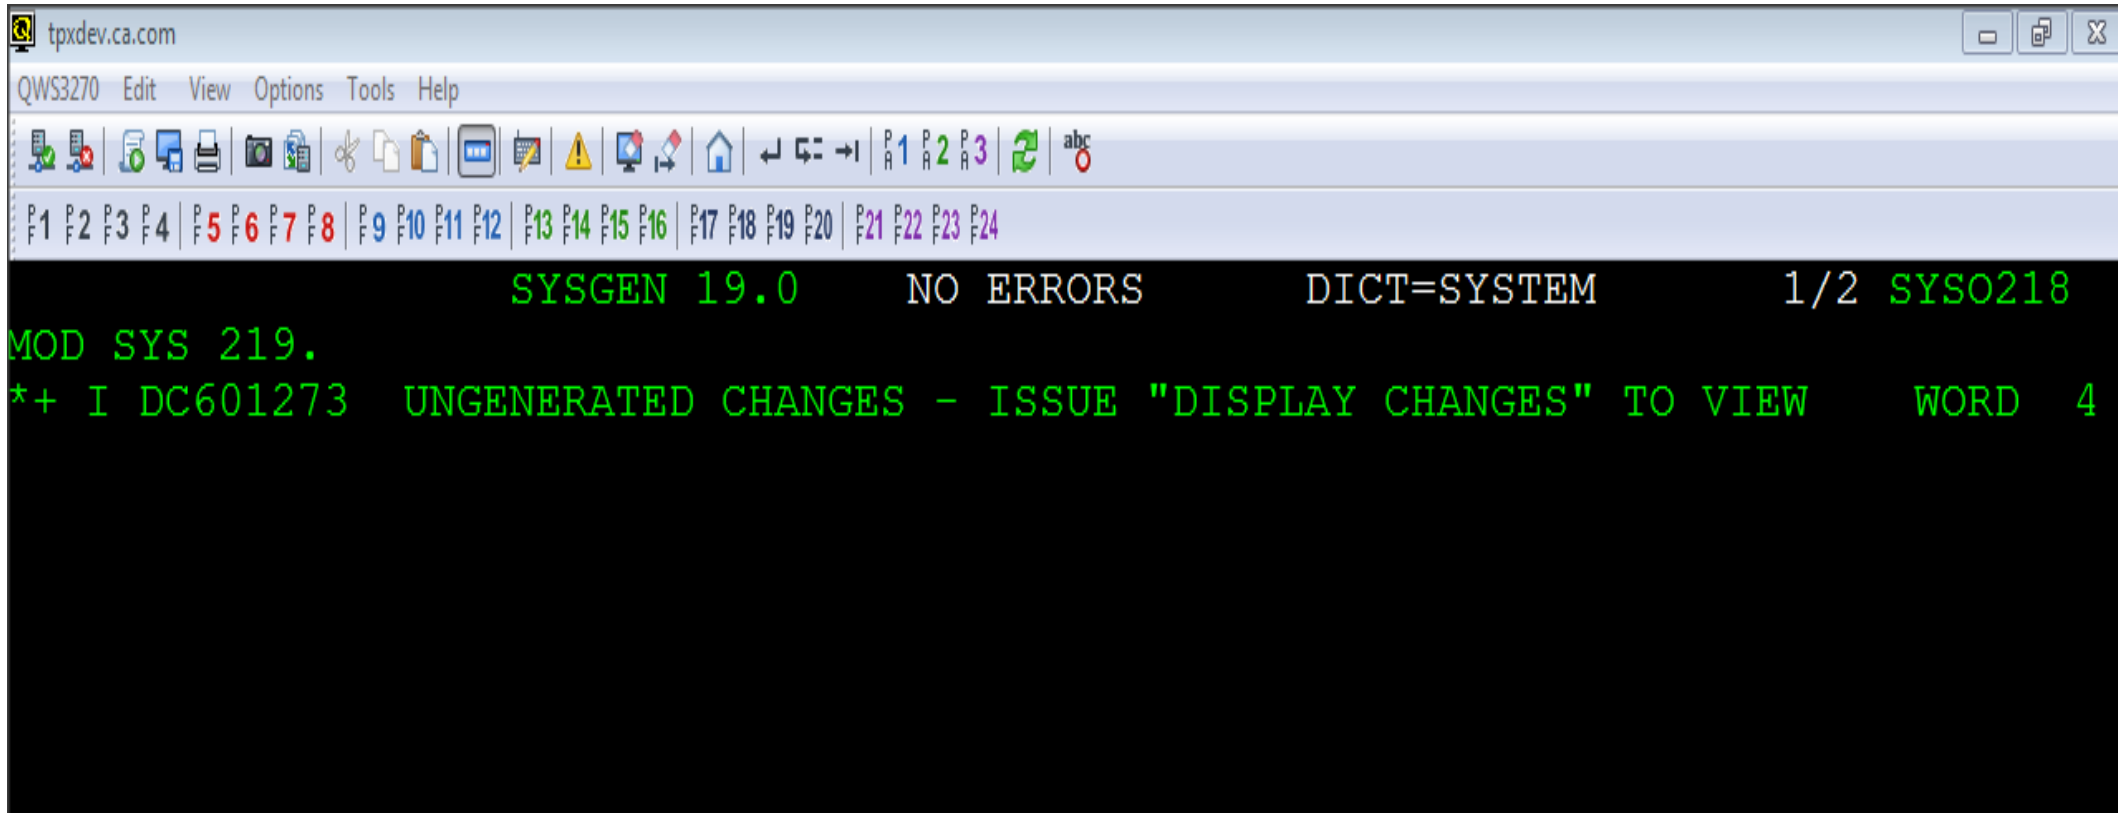

- The "DISPLAY CHANGES" command will display all changed entities
- If there are no changed entities, the following message appears:

DC601272 NO CHANGES SINCE LAST GENERATE

- The SYSGEN Generation Summary now includes all SYSGEN entities

SYSGEN Enhancement to Avoid Surprises

- DC601273 message displays when getting current on a system:

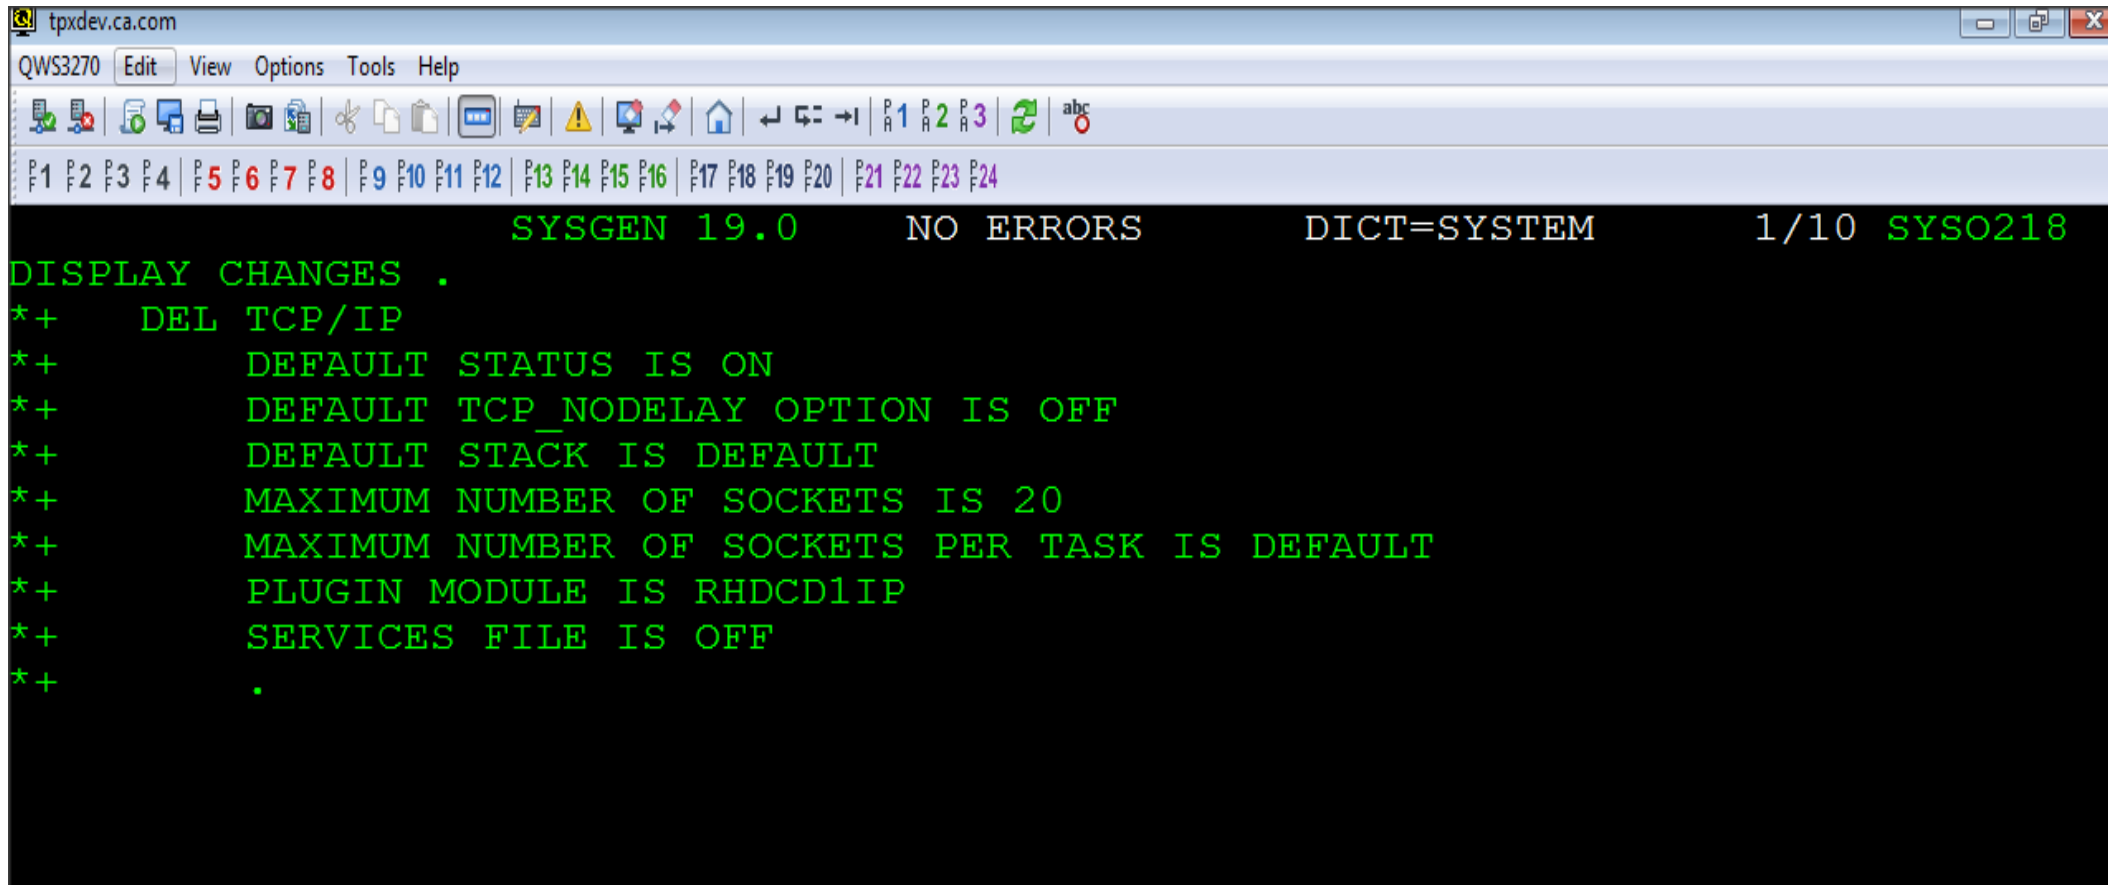

The screenshot shows a QWS3270 terminal window with a menu bar (Edit, View, Options, Tools, Help) and a toolbar. The main display area shows the following text in green on a black background:

```
SYSGEN 19.0      NO ERRORS      DICT=SYSTEM      1/2 SYSO218
MOD SYS 219.
*+ I DC601273  UNGENERATED CHANGES - ISSUE "DISPLAY CHANGES" TO VIEW      WORD  4
```

SYSGEN Enhancement to Avoid Surprises

- DISplay CHAngeS command displays any ungenerated changes:

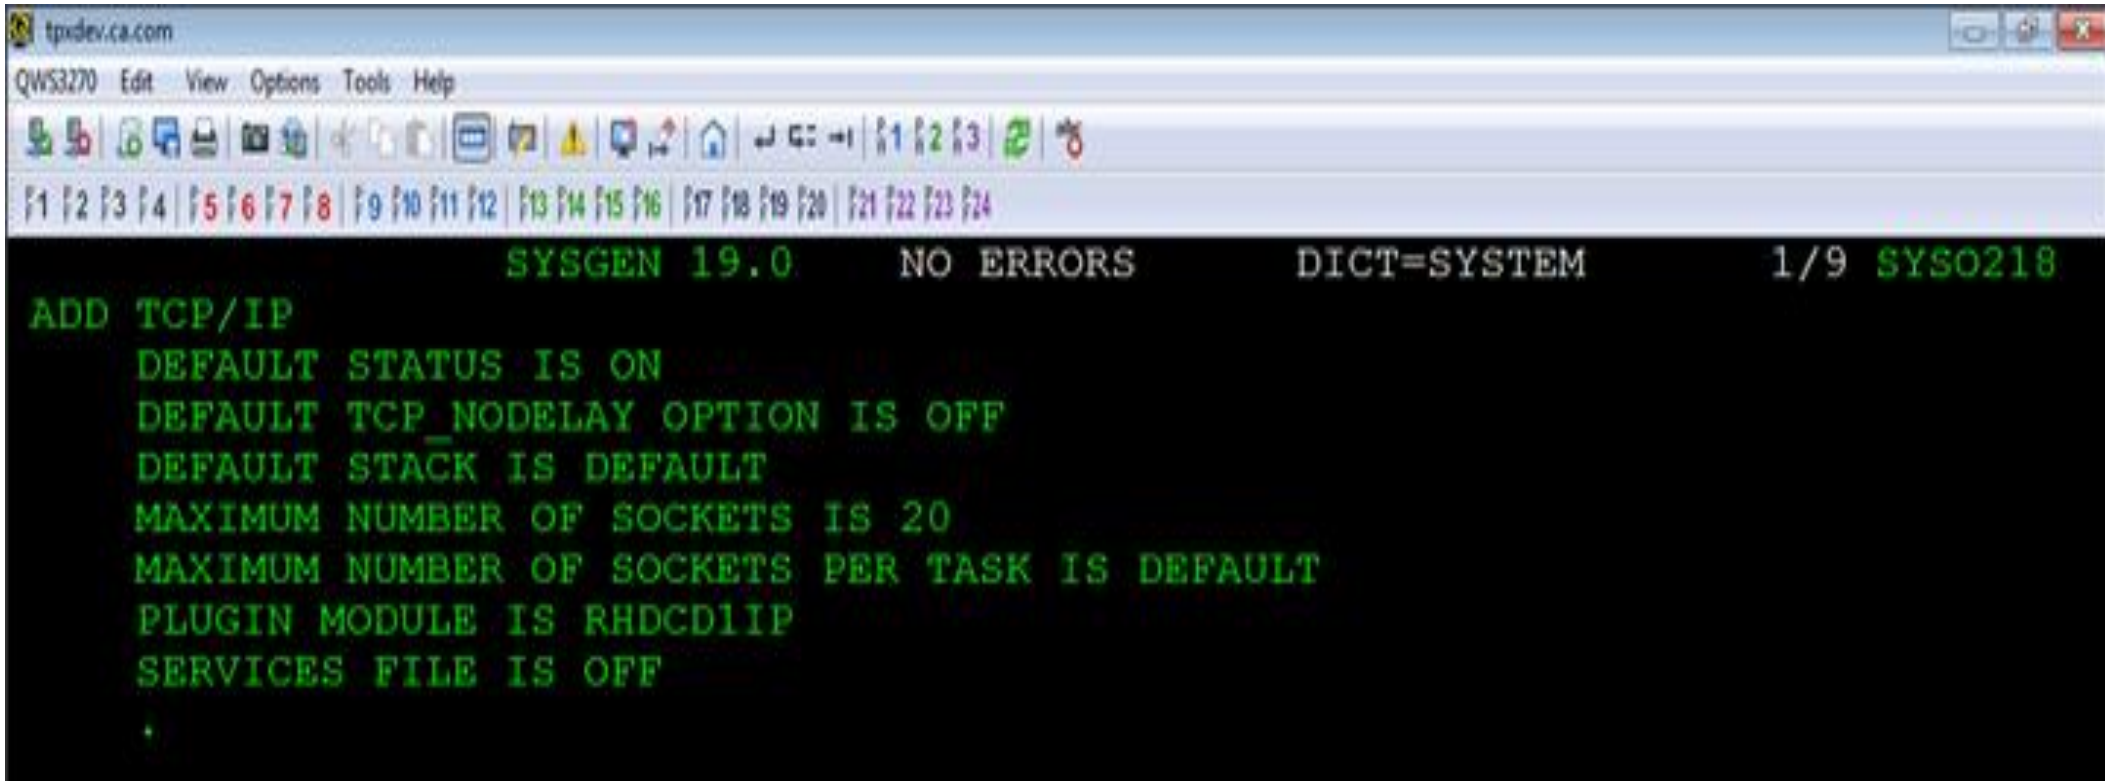

The screenshot shows a window titled "tpxdev.ca.com" with a menu bar (Edit, View, Options, Tools, Help) and a toolbar. Below the toolbar is a status bar with page numbers 1 through 24. The main display area shows the following text:

```
SYSGEN 19.0      NO ERRORS      DICT=SYSTEM      1/10 SYSO218  
DISPLAY CHANGES .  
*+   DEL TCP/IP  
*+   DEFAULT STATUS IS ON  
*+   DEFAULT TCP_NODELAY OPTION IS OFF  
*+   DEFAULT STACK IS DEFAULT  
*+   MAXIMUM NUMBER OF SOCKETS IS 20  
*+   MAXIMUM NUMBER OF SOCKETS PER TASK IS DEFAULT  
*+   PLUGIN MODULE IS RHDCD1IP  
*+   SERVICES FILE IS OFF  
*+   .
```

SYSGEN Enhancement to Avoid Surprises

- Undesirable changes can be corrected:

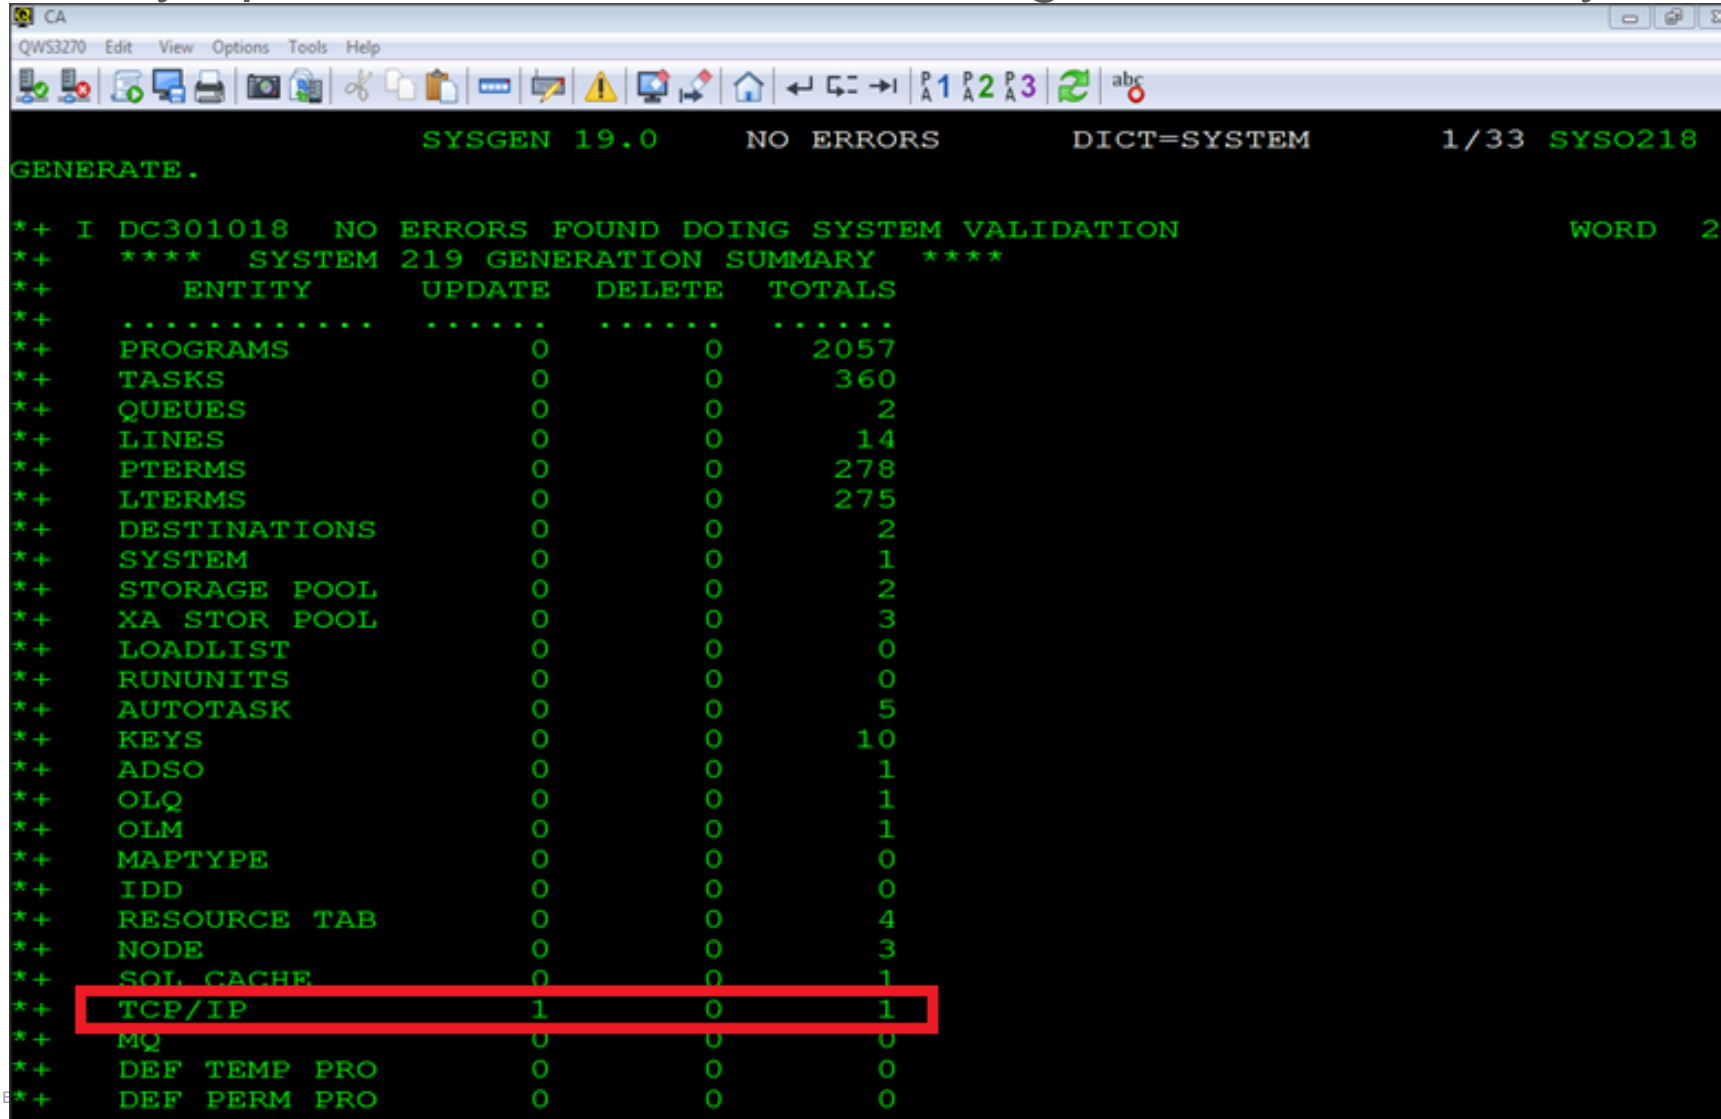

The screenshot shows a window titled 'tpxdev.ca.com' with a menu bar (QW53270 Edit View Options Tools Help) and a toolbar. Below the toolbar is a status bar with file numbers 1-24. The main area displays the output of the SYSGEN 19.0 command, which is a list of system configuration parameters and their current settings. The output is as follows:

```
SYSGEN 19.0      NO ERRORS      DICT=SYSTEM      1/9 SYSO218

ADD TCP/IP
  DEFAULT STATUS IS ON
  DEFAULT TCP_NODELAY OPTION IS OFF
  DEFAULT STACK IS DEFAULT
  MAXIMUM NUMBER OF SOCKETS IS 20
  MAXIMUM NUMBER OF SOCKETS PER TASK IS DEFAULT
  PLUGIN MODULE IS RHDCD1IP
  SERVICES FILE IS OFF
```

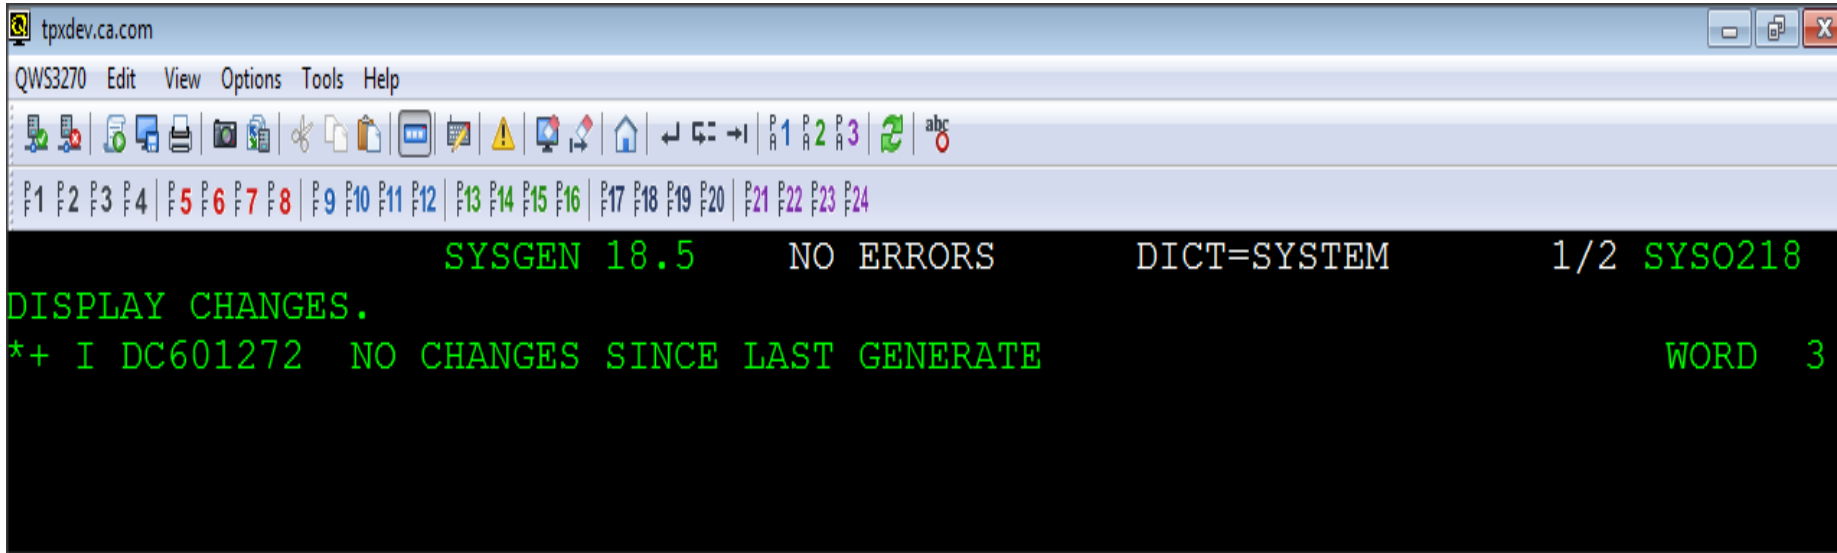

SYSGEN Enhancement to Avoid Surprises

- Entity update is documented in the generation summary:

```
CA
QWS3270 Edit View Options Tools Help
SYSGEN 19.0 NO ERRORS DICT=SYSTEM 1/33 SYSO218
GENERATE.
*+ I DC301018 NO ERRORS FOUND DOING SYSTEM VALIDATION WORD 2
*+ **** SYSTEM 219 GENERATION SUMMARY ****
*+ ENTITY UPDATE DELETE TOTALS
*+ .....
*+ PROGRAMS 0 0 2057
*+ TASKS 0 0 360
*+ QUEUES 0 0 2
*+ LINES 0 0 14
*+ PTERMS 0 0 278
*+ LTERMS 0 0 275
*+ DESTINATIONS 0 0 2
*+ SYSTEM 0 0 1
*+ STORAGE POOL 0 0 2
*+ XA STOR POOL 0 0 3
*+ LOADLIST 0 0 0
*+ RUNUNITS 0 0 0
*+ AUTOTASK 0 0 5
*+ KEYS 0 0 10
*+ ADSO 0 0 1
*+ OLQ 0 0 1
*+ OLM 0 0 1
*+ MAPTYPE 0 0 0
*+ IDD 0 0 0
*+ RESOURCE TAB 0 0 4
*+ NODE 0 0 3
*+ SQL CACHE 0 0 1
*+ TCP/IP 1 0 1
*+ MQ 0 0 0
*+ DEF TEMP PRO 0 0 0
*+ DEF PERM PRO 0 0 0
```

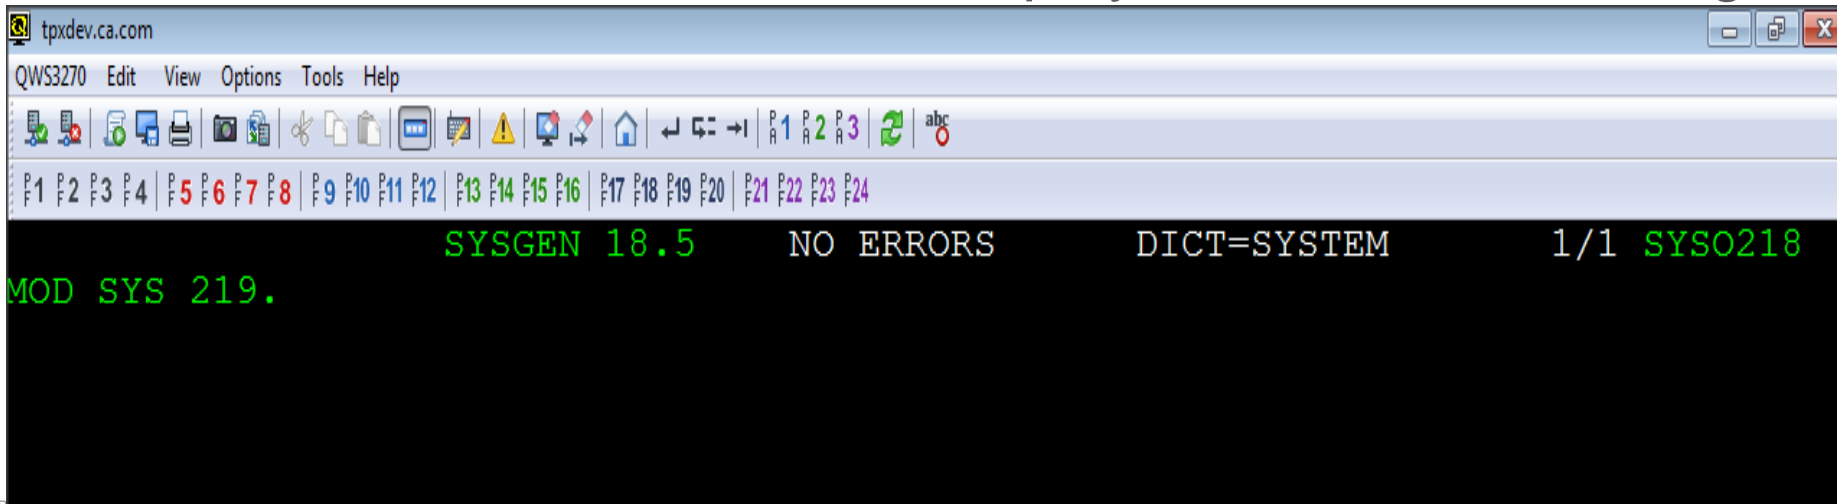

- DC601272 message displays if there have been no changes:

A screenshot of a terminal window titled 'tpxdev.ca.com'. The window has a menu bar with 'QWS3270', 'Edit', 'View', 'Options', 'Tools', and 'Help'. Below the menu bar is a toolbar with various icons. The main display area shows the following text in green on a black background:

```
          SYSGEN 18.5      NO ERRORS      DICT=SYSTEM      1/2 SYSO218  
DISPLAY CHANGES.  
*+ I DC601272  NO CHANGES SINCE LAST GENERATE      WORD  3
```

- DC601272 or DC601273 do not display if there are no changes:

A screenshot of a terminal window titled 'tpxdev.ca.com'. The window has a menu bar with 'QWS3270', 'Edit', 'View', 'Options', 'Tools', and 'Help'. Below the menu bar is a toolbar with various icons. The main display area shows the following text in green on a black background:

```
          SYSGEN 18.5      NO ERRORS      DICT=SYSTEM      1/1 SYSO218  
MOD SYS 219.
```

SYSGEN Enhancement to Avoid Surprises

- Batch SYSGEN compiler will now set a return code of 4 if Display Changes command is issued, and changes exist. For no changes, return code is 0.
- This allows a job step to be inserted prior to steps that make changes, so the SYSGEN update job may be conditionally ended. Changes can be examined.
- If there are no changes:

```
RHDCSGEN 19.0          CA, INC.          DATE          TIME          PAGE
