Introducing
CA Identity Suite 14.0

Date: November 28th, 2016

From: The CA Identity Suite Product Team

Subject: General Availability Announcement for CA Identity Suite 14.0

We are excited to announce today the General Availability (GA) of CA Identity Suite 14.0. This release is a major release, introducing an entirely new approach for rapid product deployment that can dramatically reduce the time-to-value and cost-of-ownership for your Identity Suite deployment. Please see this short video describing the new rapid deployment capabilities: https://youtu.be/NdR-r5YHi-Y

In addition, we have included a new integration of CA Identity Suite with CA Privileged Access Manager, delivering unique advantage for customers that are required to have consistent governance for privileged and regular access. The release also includes over 25 other different new features, enhancements and new platform certifications, as well as a number of important engineering improvements.

Existing Identity Suite customers should strongly consider updating their deployment for the many benefits that this new release can provide.

Detailed information regarding this release content including new capabilities and enhancements can be found at the CA documentation site:

https://docops.ca.com/ca-identity-suite/14-0/EN

New Capabilities In This Release:

Virtual Appliance platform:

CA Identity Suite 14.0 officially introduces the CA Identity Suite virtual appliance. The virtual appliance is a complete operational platform that allows implementers to setup a production-ready, highly available, deployment using drag & drop interface in minutes. The platform eliminates the traditional installation phase and streamlines other on-going administrative tasks such as adding/removing capacity, implementing upgrades, provides service monitoring, collecting logs across clustered machines and more (The virtual appliance packaging will be available in the next few days).
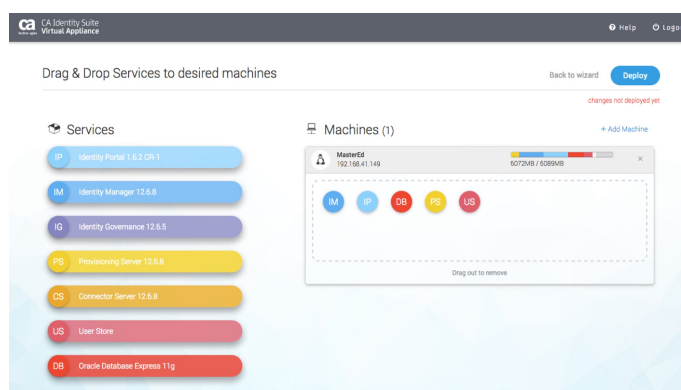

DeploymentXpress:

The DeploymentXpress is a new capability included in the CA Identity Suite. It provides a use case marketplace, allowing implementers to deploy end-to-end, pre-configured, best-practice business use cases in just a few clicks. The use cases are based on CA's experience with hundreds of large-scale enterprise deployments. Customers using this capability can see a dramatic time-to-value improvement.
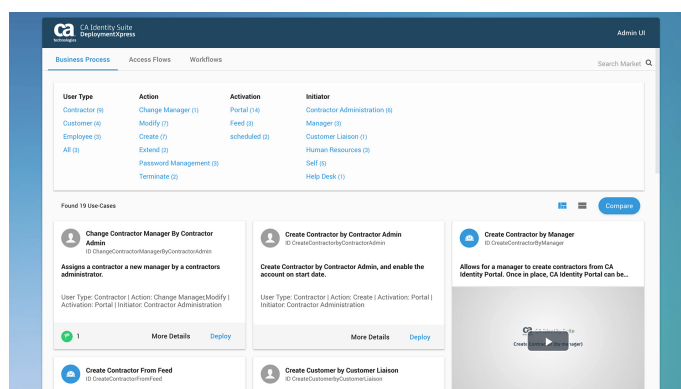

Privileged Access Governance:

Privileged Access Governance introduces a granular integration between CA Identity Suite and CA Privileged Access Manager (CA PAM). The integration addresses the need for consistent governance processes across privileged and regular access. It includes Access Certification, Access Request and Provisioning/De-provisioning for privileged access.
