

# Datacom<sup>™</sup>/DB: DBUTLTY User Database Management - Routine Functions 200

## EDUCATION COURSE DESCRIPTION

### SUPPORTED PRODUCT

#### RELEASE(S)

Datacom<sup>™</sup>/DB  
Version 15.x

### COURSE TYPE, LENGTH, & CODE

- Web-Based Training (WBT)
- 1.5 Hours
- 06DCM20060

## Course Overview

Datacom is a reliable database repository with enterprise-wide high-volume workload and fault-tolerant capabilities. Datacom and its family of rDBMS products provide you with that repository.

Datacom provides transaction processing performance for existing and new workloads, helping you consolidate business functions on a central data repository, as needed. When combined with related solutions, Datacom delivers cost-effective and reliable database processing.

This course covers the DBUTLTY commands and functions used to routinely manage and maintain application database structural components.

## This Course Will Show You How To:

- Describe DBUTLTY general terminology and concepts
- Identify the database structure components
- Describe the database resource creation steps
- Identify DBUTLTY Universal Keywords
- Describe routine DBUTLTY User Database commands and functions
- Describe the DBUTLTY commands and functions used to routinely manage and maintain application database structural components
