

SEP 12.1 Small Business edition | Quick Licensing guide.

This document has for goal to show the difference between each kind of licenses SEP 12.1 SBE uses and what are the implication of having an expired license.

Glossary:

Grace period: Extra amount of time given by Symantec to the license validity. (Time between the End date and the Expiration date).

Submission: In SEP 12.1 contexts it is the ability to send feedback to the Insight database in the cloud.

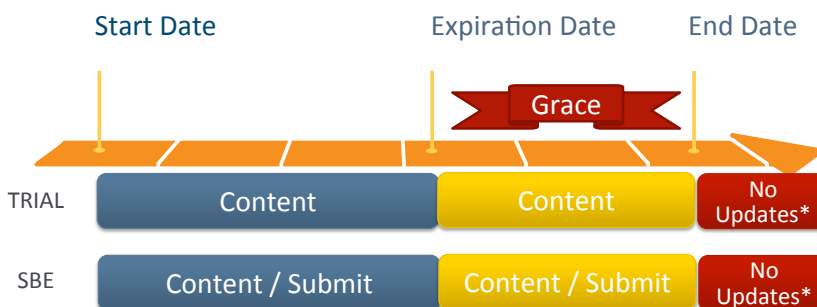

Content: Regroups all security definitions required to protect the endpoint (AntiVirus, IPS, BASH, Whitelisted applications...)

License types:

| License Types | Description | Duration | Submission to Insight | Grace period |
|---------------|---|-------------------|-----------------------|----------------|
| Trial | Default license when installing SEP from the SEP 12.1 DVD or file-connect download. | 30 Days | NO | YES 30 Days |
| Never Expire | Built-in license automatically installed on unmanaged clients. | Infinite | NO | N/A |
| Over deployed | Built-in pre expired license. Installed on systems exceeding the number of seats purchased and set on the paid license. | Pre expired | NO | NO |
| Paid | Activation license, purchased and to be installed on the SEPM either with a serial number or a .slf file. | Terms of contract | YES | YES |

NOTE: In case of an upgrade from SEP 12.0 SBE to SEP 12.1 SBE, the licenses in place are carried forward.

Enforcement:

Did you know?

The ability to query Insight does not require any kind of license. Even expired client can query the Insight server.

Expired Trial license: stops downloading content 60 days after the installation date. Warning before expiration date are sent (30days), an extra 30 grace days is built-in. The client displays a red cross status and clear messaging show that the license is expired.

Expired Paid/Upgrade licenses: After the end date the ability to download content and submit to Insight is revoked. The client displays a red cross status and clear messaging show that the license is expired.

On both cases the reporting portal generates alerts and popups to warn the administrator of the non compliance.
