Control Compliance Suite (CCS) 12.6.0 Release Announcement

[March 31, 2022]

IMS ESP (CCS) team is pleased to announce general availability (GA) for Control Compliance Suite 12.6.0. The binaries are available at the Broadcom SED Support [Portal](#).

We would like to extend our sincere thanks to all the global teams for their work and commitment in delivering this release.

This release adds significant capability to the product that allows the customers to automate product deployment and support for automated disaster recovery, including additional REST API that helps reduce server provisioning time via automation of config assessment.

Release Highlights

- Automation of Pave, Repave and Disaster Recovery
    - The disaster recovery process can now be automated using the provided Ansible playbooks. The automated disaster recovery process includes automated product installation, backup and restoration of data to a designated secondary site (Data Center)
- Ability to collect CCS logs, configure log severity and log level using CCS Console.
- Ability to perform silent uninstallation of CCS Agents.
- Ability to target specific CCS Managers within a site for Asset import and Agents jobs.
- Agent Registration Utility to accept multiple CCS Managers for Agent registration for better reliability and redundancy during the agent registration process.
- Ability to include asset groups in Agent Management Job
- Create Job and Update Job APIs to include additional scheduling properties
- New API for searching jobs using different job properties
- The CCS installation is now supported on Microsoft Windows Server 2022.
- Red Hat Enterprise Linux 8 PPC Little Endian (LE) Agent is now provided for data collection using CCS
