

CA Dynam[®] for z/VSE Plus

Product sheet addendum—external

CA Dynam for z/VSE Plus includes the following interfaces, options and capabilities in the base product license.

File Independence	A comprehensive, file-independent facility for tape, DASD and unit record devices, this capability dynamically changes any standard sequential file definition to tape or disk (sequential or VSAM), and allows files to be dynamically re-blocked to any block size.
Disk Management for z/VSE	A disk management solution that provides a single point of control for disk processing and disk management in the IBM [®] z/VSE [®] mainframe environment, this capability is designed to safeguard against premature scratching of your active z/VSE disk data sets, and to ensure that your most current disk versions are always used for input.
Tape Management for z/VSE	A tape management solution that provides a single point of control for tape processing and tape data set management in the z/VSE mainframe environment, this capability is designed to safeguard against premature scratching of your active z/VSE tape data sets, and to ensure that your most current tape versions are always used for input.
