

Recovery Techniques for the New DBA

Terry Schwartz
NTT DATA

IUA/CA IDMS™ Technical Conference May 7-11, 2018

Abstract

- This session focuses on the procedures and utilities that a CA IDMS Database Administrator can use to identify and correct a database integrity problem. Attendees learn the recovery methods available and when they are appropriate to use. Also covered are techniques for preventing integrity problems. Attend this sessions if you are responsible for the integrity of your shop's database.

Disasters

Business Continuity and Disaster Recovery

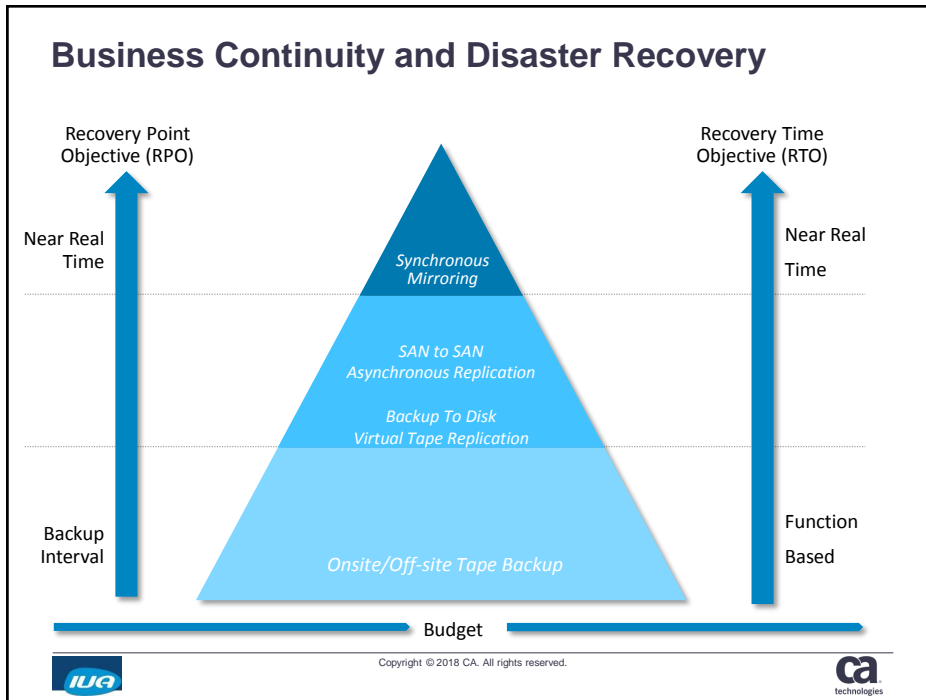

Why is BC/DR Important ?

According to the National Archives & Records Administration in Washington, more than 93% of companies that suffered a serious data loss after a disaster and who were unable to access their data center for 10 days or more, filed for bankruptcy within just 12 months of the incident.

Corporate directors can be held libel under "Prudent Man Laws" for failing to protect the business from a disaster event.
 (varies from state to state and country)

Within two years after Hurricane Andrew in Florida (1992), 80% of affected companies that lacked a business continuity plan went out of business (FEMA)

Business Continuity and Disaster Recovery

- Certifications
 - Certified Business Continuity Planner (CBCP)
 - www.drii.org
 - Qualifications - 5 years of experience
 - Certification Exam
 - Annual certification fee

ca technologies

Types of Integrity Problems

- Physical Database Integrity Problems
 - Record errors
 - Compressed record errors
 - Record in wrong area
 - Wrong record length
 - Broken chains
 - Pointer errors
 - Set errors
 - Integrated Index errors
 - Fragmented record errors
 - Page errors

Copyright © 2018 CA. All rights reserved.

Types of Integrity Problems

- Logical Database Integrity Problems
 - Business rules not respected
 - Orphaned records with no owner
 - 1-n relationship not respected
 - Application program ran correctly with wrong input

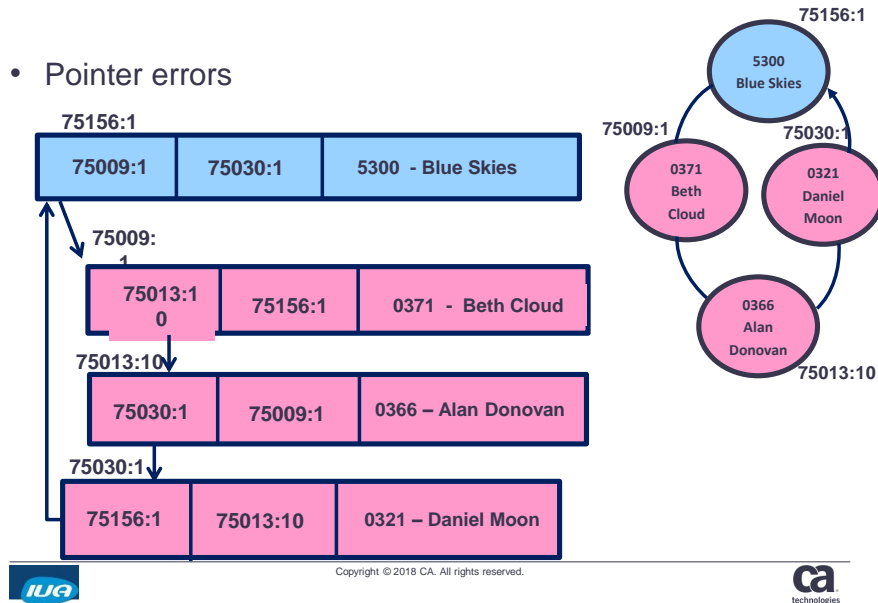

Copyright © 2018 CA. All rights reserved.

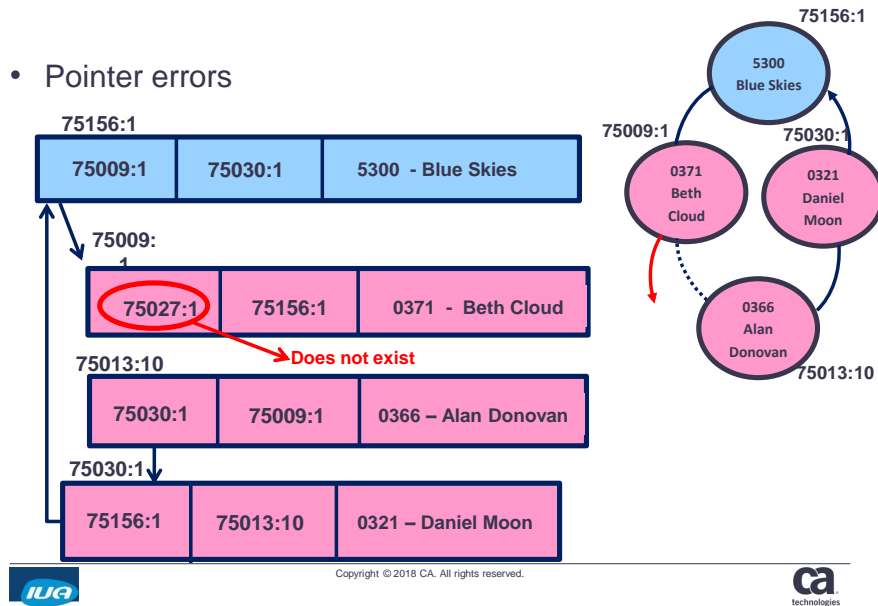

Physical Database Integrity Problems

- Pointer errors

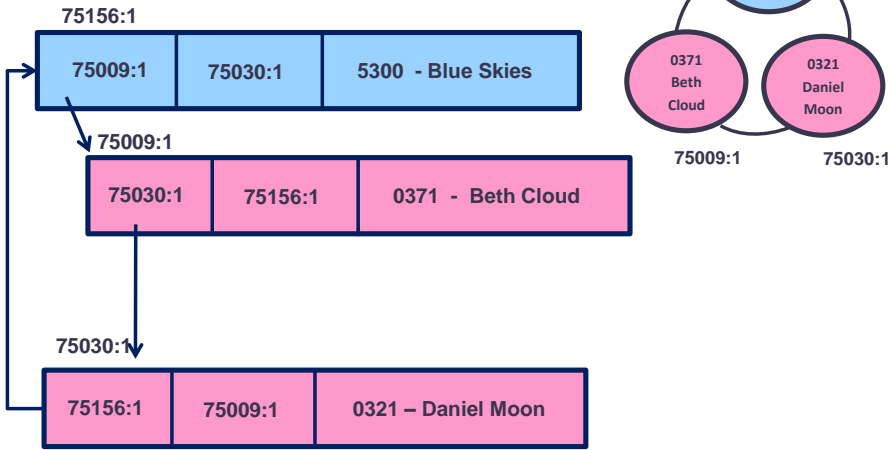

Physical Database Integrity Problems

- Pointer errors

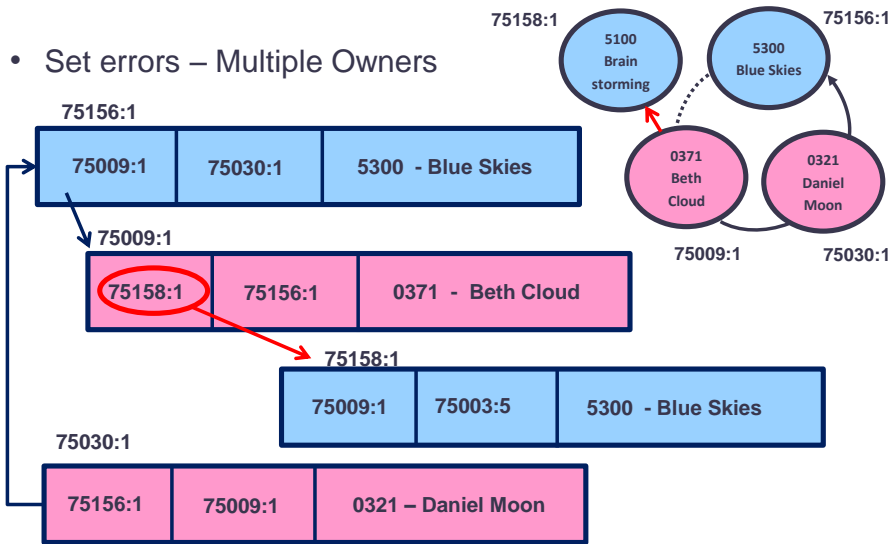

Physical Database Integrity Problems

- Set errors – Multiple Owners

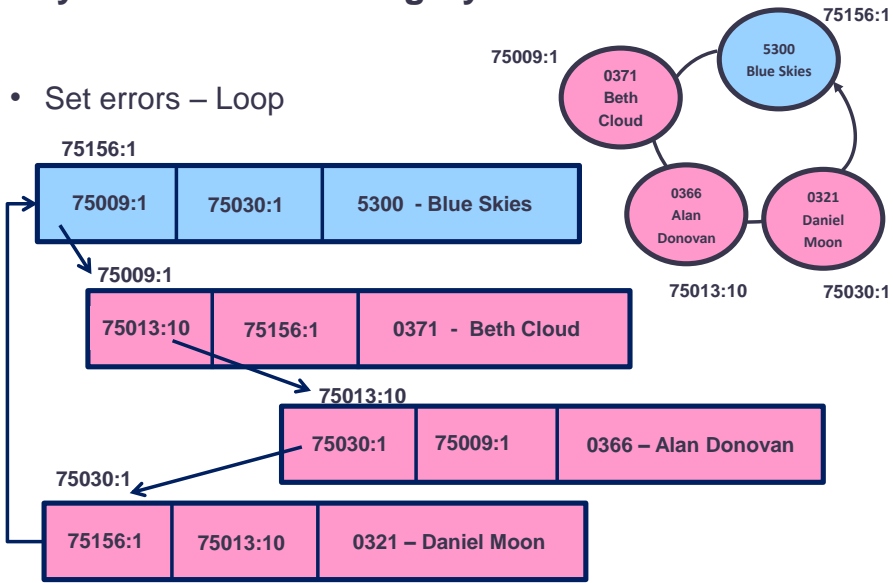

Physical Database Integrity Problems

75002:4

Physical Database Integrity Problems

- Fragmented record errors

Physical Database Integrity Problems

- Fragmented record errors

Physical Database Integrity Problems

- Page Errors

Page 63014

Header: Page Number (4 bytes)
SR1 record (12 bytes):
- Next, Prior of CALC chain (8 bytes)
- Space Available on page (2 bytes)
- 00 (2 bytes)

Footer: Line Index 0 (8 bytes):
Record ID (2 bytes)
Offset (2 bytes)
Length of record (2 bytes)
Length of prefix (2 bytes)
Line Space Count (2 bytes)
00 (2 bytes)
Page Number (4 bytes)

Causes of Integrity Problems

- Physical Integrity Problem:
 - Improper Recovery from
 - Program failure
 - System failure
 - Hardware failure
 - Hardware malfunction
 - Improper use of FIX PAGE, UNLOCK
 - Rare software problem
 - Fix RO88664(R18), RO88341 (R18.5), RO88672(R19), RO88798 (R18.5 DOS)

Causes of Integrity Problems

- Logical Integrity Problem:
 - Application Program bug
 - Execution of program at wrong time

Copyright © 2018 CA. All rights reserved.

How to Detect Integrity Problems – at runtime

- Loop
- Error-Status
 - 0226 ERASE
 - XX60 Inconsistent record in set
 - XX61 Invalid dbkey
- Abend Codes
 - 1117 Cannot adjust space available on page
 - 1123 Broken Fragment chain
 - 1164 Error trying to backout previous error while linking record in set
 - 1197 Error trying to delink a record from a set
 - 1198 Error trying to link a record into a set

Copyright © 2018 CA. All rights reserved.

How to Detect Integrity Problems – at runtime

- Messages
 - DB002304 Invalid record in set
 - DB002305 Dbkey in set not found
 - DB002423 Dbkey not found
 - DB002424 SR8 record not found
 - DC598203 SR2 pointer no good
 - UT003012 Possible broken chain/invalid SSC
 - UT016018 SR8 orphan count

Copyright © 2018 CA. All rights reserved.

How to Detect Integrity Problems - reporting

- IDMSDBAN
 - Report 2 – Area Report
 - Checks Page Integrity

```
IDMSDBAN - DATA BASE ANALYSIS                                REPORT 1:  MESSAGES

How to Fix Physical Integrity Problems

- FIX PAGE

- Manually fix broken chain by plugging in proper value

In our example, NEXT pointer of 75030:1 should be equal to 75156:1

```
IDMSBCF 18.5 CA IDMS Batch Command Facility
FIX PAGE 75030
VER 0018 0125,0101
REP 0018 0125,9401
```

How to Fix Logical Integrity Problems

- Application program bug
 - Fix the bug
 - Might need one-time program to fix data
- Execution of program at wrong time or with wrong input
 - What do you do ?
 - Depends on when problem is discovered
 - If right after => Rollback
 - If not => one-time program to fix data

How to Avoid Integrity Problems

- Proper backup and recovery procedures
- Never run UNLOCK on locked databases unless you are 150% certain there are no broken chains

Database maintenance is done under the covers by DBMS if area opened in update mode

- Apply HYPER apars regarding data integrity

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Frequently scheduled backups
 - Quiesced backups
 - CV down
 - CV up – Areas quiesced
 - DCMT VARY AREA RETRIEVAL or OFFLINE
 - DCMT VARY SEGMENT RETRIEVAL or OFFLINE
 - DCMT QUIESCE AREA
 - DCMT QUIESCE SEGMENT
 - DCMT QUIESCE DBNAME

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Frequently scheduled backups (cont'd)
 - Hot backups
 - Quiesce update activity on areas
 - Note date/time of quiesce point
 - Restart update activity on areas
 - Backup the areas
 - Optionally, get another quiesce point on areas

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Frequently scheduled backups
 - Local mode update jobs
 - Backup before job
 - Backup after job

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery after warmstart failure
 - Offload all journal files
 - ROLLBACK ACTIVE
 - UNLOCK areas not affected by ROLLBACK
 - FORMAT journals

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery from database I/O error
 - If transactions' recovery successfully
 - DCMT VARY AREA xxx OFFLINE
 - Fix problem
 - DCMT VARY AREA xxx ONLINE

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery from database I/O error (cont'd)
 - If transactions' recovery unsuccessfully
 - DCMT VARY AREA xxx TRANSIENT RETRIEVAL/OFFLINE
 - DCMT VARY JOURNAL
 - DCMT VARY FILE DEALLOCATE
 - Restore backup
 - ROLLFORWARD FILE
 - Rename files
 - DCMT VARY FILE ALLOCATE
 - DCMT VARY FILE ACTIVE
 - DCMT VARY AREA ONLINE

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery from journal I/O error (cont'd)
 - Quiesce update activity
 - If all update transactions finish normally
 - Backup areas
 - Format affected journal file
 - DCMT VARY AREA ONLINE

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery from journal I/O error
 - If you get SUSPENDED TRANSACTIONS
 - Cancel the system
 - Restore backups of all areas in update mode
 - ROLLFORWARD COMPLETE for all those areas
 - FORMAT JOURNAL ALL
 - Backup areas
 - Restart system

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Recovery from local mode operations
 - Not journaling
 - Restore backup taken before job
 - Journaling to tape
 - ROLLBACK with local tape journal
 - Journaling to disk
 - Copy disk journal to tape
 - ROLLBACK with tape journal
 - If using incomplete journal file
 - FIX JOURNAL

Copyright © 2018 CA. All rights reserved.

Backup and Recovery Techniques

- Mixed mode recovery
 - When database is updated by both CV and local mode job (at different times)
 - Will need CV and local journals
 - Can use MERGE ARCHIVE or
 - Can run separate ROLLFORWARD jobs

Copyright © 2018 CA. All rights reserved.

Summary

- Important to have backup and recovery procedures (and to test them out!!!)
- Be VERY cautious when using UNLOCK and FIX PAGE

Copyright © 2018 CA. All rights reserved.
