

CA Security Customer Newsletter - Winter 2016

New Products Announced at CA World 2016!

CA Technologies made several ground-breaking company announcements at CA World. We've highlighted the Security announcements below.

- [CA Threat Analytics for PAM](#), which integrates with CA Privileged Access Manager (PAM) and uses advanced behavior analytics and machine learning to detect and mitigate threats coming from privileged user accounts.
- [CA Identity Service](#) is a SaaS offering that addresses the need for a modern, hybrid IAM solution – giving businesses the agility to quickly and securely adopt cloud applications and services and manage them from a single launch pad alongside their on-premises applications controlled by CA Single Sign-On.
- [CA Identity Suite](#) which includes Deployment Xpress to dramatically streamline deployment of identity use cases. It adds to the deployment simplicity that was introduced with the Virtual Appliance. It also includes integration with CA Privileged Access Manager (PAM) to provide governance of privileged accounts.

Attending RSA in February? Visit The CA Technologies Booth!

Date: February 13-17, 2016

Location: Moscone Convention Center, San Francisco, CA

Booth Location: #3409, North Expo D-E

Help shape the future of products

The CA SSO Product team is pleased to announce the general availability of CA SSO 12.6

CA announced the General Availability of CA Single Sign-On on November 30th. Within this release, we focused on three core themes: Expanded Capabilities; Simplified Operations & Manageability; and Reduce Cost of Ownership. Enhancements include certification management for federated partnerships and administrative search for agents. The release also saw the migration to a 64-bit platform and support for Red Hat 7, both of which are showing significant performance gains during internal benchmark testing. Finally, we helped to reduce total cost of ownership further by removal of the risk engine server component to support enhanced session assurance; this capability has been built into the CA Access Gateway. For more information, please see the [Getting to Know CA SSO 12.6 Webcast](#).

CA World 2016 – Best Ever!

The reviews are in! CA World was great this year. If you attended, you were part of the excitement. The security area was buzzing with informative tech talks, customer case studies and a unique interactive demo experience. If you did not attend, you can still share the experience by listening to the Security General Manager, Mo Rosen's keynote [replay](#). You can also view the presentations and coming soon, videos of the security theater sessions at ca.com/caworld.

you rely on through our product surveys:
