

March 11, 2019 3:26 PM from William to everyone: As SpectroSERVERs become more heavily used, will Kubernetes scale out additional pods or would you need to install extra clusters of SpectroSERVER containers? to handle the load?

March 11, 2019 3:28 PM from William to everyone: If the environment will scale out more pods as load grow, is there a limitation to the number of devices/models that one cluster can handle?

March 11, 2019 3:32 PM from William to everyone: That answers it. Thank you.

March 11, 2019 3:43 PM from David to everyone: So how are customizations in SANM/alarmnotifier and partslist directories handled?

March 11, 2019 3:50 PM from Srinivas Mortha to everyone: It preserves the custom directory.. Partlists & SANM customerizations are not handled
