Agenda

Ideas Discussion & Voting

1. **Open Handout** (contains the Ideas we will be discussing today)

2. For each Idea from the list,
   1. Discuss overview of enhancement request
   2. Discuss pain points and benefits
   3. **You will vote UP or DOWN**
   4. Q&A

3. We will attempt to cover as many ideas as possible, until we run out of time

What is the Broadcom Ideas Program?

"Ideas" is a forum in the Broadcom Communities where you can post, vote, and comment on enhancement requests. The product teams monitor the Ideas board for future development plans.

To learn more about the program:

- Read our Broadcom Ideas Program Announcement
- Read the FAQ
- Read the New Status Definitions

Note: Your first post to any of our communities will be placed in a moderation to help minimize spam. Our community managers closely monitor this moderation queue so please be patient. Please do not submit the same post multiple times.

DAR: Expand DBUTLTY LOAD LOADDUPS option – Print total of duplicates encountered at end of LOAD

Follow ☆

Edit

Ready for Voting – Open

Last activity 3 days ago

Dec 05, 2019 02:15 PM

(This item was originally submitted by Bill Matthias III on 03-29-2019 at 08:20 PM as a part of "DAR: Expand the LOADDUPS option of DBUTLTY LOAD.")

For decades CA Datacom/DB has provided a LOADDUPS=Y/N option that is part of the DBUTLTY LOAD function. With NO specified, as soon as a duplicate is encountered the LOAD stops. With YES specified, all of the input records are loaded with a snap dump of the Master key & keyed being displayed in the contents of a small snap dump. Nice options but I think they could be expanded to make it more customer friendly.

1) Currently in the SYSPRINT a small report is produced showing the number of input records and output records. I would like to see an additional line added on the output report that provides the customer with a count of how many duplicates were actually encountered. Adding up the number of 2 page snap dumps with a master key is not very user friendly.
