

STABILIZATION NOTICE

Date: 12 January 2021
To: Customers of CA Virtual Assurance for Infrastructure Managers
From: Enterprise Software Division, AIOps Product Team
Subject: Stabilization Announcement for CA Virtual Assurance for Infrastructure Managers 12.9

CA Technologies, A Broadcom Company, is continually working to improve our software and services to best meet the needs of our customers; we thank you for your business that makes this possible.

As part of our regular product planning cycle, we have reviewed the position of CA Virtual Assurance for Infrastructure Managers (CA VAIM) in the marketplace, from both a sales and technology perspective. We have determined that while this product still provides useful functions to some customers, its value to most customers has declined significantly over the past few years as alternative solutions have gained in value, including options provided by Broadcom. Therefore, we have decided to stabilize CA VAIM.

In accordance with the [Broadcom Maintenance Policy Handbook](#), please consider this posting as your written notification that we will be stabilizing CA VAIM version 12.9 effective **12 January 2021**. Functionally stabilizing a product means there will be no new Versions or Releases or further enhancements to this product. However, maintenance and support for this product will continue in accordance with your active maintenance contract for CA VAIM.

Stabilization will allow our development organization to focus its resources and add value to the next release of DX Infrastructure Manager, which is our recommended transition path for CA VAIM users.

At this time, we recommend you explore DX Infrastructure Manager as soon as possible and take full advantage of this modern, comprehensive software offering. For more information on the scope and capabilities for DX Infrastructure Manager, please look at this [Specific Program Documentation](#).

Thanks again for your business.

The AIOps Product Team
